Safety instructions

Before installing and operating the projector, read this manual thoroughly.

This projector provides many convenient features and functions. Operating the projector properly enables you to manage those features and maintain it in good condition for many years to come.

Improper operation may result in not only shortening the product life, but also malfunctions, fire hazards, or other accidents.

If your projector does not seem to be operating properly, read this manual again, check operations and cable connections, and try the solutions in the “Troubleshooting” section in the user’s manual. If the problem still persists, contact the Canon Customer Support Center.

	<div>CAUTION</div> <div>RISK OF ELECTRIC SHOCK</div> <div>DO NOT OPEN</div>	
CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.		
	THIS SYMBOL INDICATES THAT DANGEROUS VOLTAGE CONSTITUTING A RISK OF ELECTRIC SHOCK IS PRESENT WITHIN THIS UNIT.	
	THIS SYMBOL INDICATES THAT THERE ARE IMPORTANT OPERATING AND MAINTENANCE INSTRUCTIONS FOR THIS UNIT IN THE USER’S MANUAL.	

CAUTION
Not for use in a computer room as defined in the Standard for the Protection of Electronic Computer / Data Processing Equipment, ANSI / NFPA 75.

Copyright notice

Please note that enlarging or reducing the size of an image for commercial purposes or public presentation may infringe on the legally protected copyright or the copyright holder of the original material.

Ensure Network Security

Take measures to ensure network security. Note that Canon is not liable in any way for direct or indirect loss from network security incidents, such as unauthorized access.

Examples of Security Measures

- Use in an intranet environment.
- Assign a private IP address.
- Use behind a firewall.
- Change passwords regularly.

About Trademarks

- Ethernet is a registered trademark of Xerox Corporation.
- Microsoft, Windows, Windows XP, Windows Vista, Windows 7, Windows 8 and Aero are registered trademarks or trademarks of Microsoft Corporation in the United States and / or other countries.
- Mac, Mac OS and Macintosh are trademarks of Apple Inc., registered in the United States and / or other countries.
- HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing, LLC.
- PLink is a registered trademark, or an application has been submitted for trademark, in Japan, the United States and / or other countries or regions.
- Crestron[®], Crestron RoomView[®], and Crestron Connected[™] are registered trademarks of Crestron Electronics, Inc.
- MHL, the MHL logo, and Mobile High-Definition Link are trademarks or registered trademarks of MHL, LLC in the United States and other countries.

Safety Precautions

WARNING:

- **THIS APPARATUS MUST BE GROUNDED.**
- **TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.**
- This projector produces intense light from the projection lens. Do not stare directly into the lens, otherwise eye damage could result. Be especially careful that children do not stare directly into the beam.
- Install the projector in a proper position. Otherwise it may result in a fire hazard.
- Allowing the proper amount of space on the top, sides, and rear of the projector cabinet is critical for proper air circulation and cooling of the unit. The diagram shown here indicates the minimum space required. If the projector is to be built into a compartment or similarly enclosed, these minimum distances must be maintained.

- Do not cover the ventilation slots on the projector. Heat build-up can reduce the service life of your projector, and can also be dangerous.
- If the projector is unused for an extended time, unplug the projector from the power outlet.
- Do not project the same image for a long time.

An afterimage may remain on the DMD panel due to the characteristics of the panel of the projector.

CAUTION ON HANGING FROM THE CEILING

When hanging the projector from the ceiling, clean the air intake vents and top of the projector periodically with a vacuum cleaner. If you leave the projector unclean for a long time, the cooling fans can be clogged with dust, and it may cause a breakdown or a disaster.

DO NOT SET THE PROJECTOR IN GREASY, WET, OR SMOKY CONDITIONS SUCH AS IN A KITCHEN TO PREVENT A BREAKDOWN OR A DISASTER. IF THE PROJECTOR COMES IN CONTACT WITH OIL OR CHEMICALS, IT MAY BECOME DETERIORATED.

■ READ AND KEEP THIS MANUAL FOR LATER USE.

All the safety and operating instructions should be read before beginning to operate the product.

Read all of the instructions given here and retain them for later use. Unplug this projector from the AC power supply before cleaning. Do not use liquid or aerosol cleaners on the projector. Use a damp cloth for cleaning.

Follow all warnings and instructions marked on the projector.

For added protection of the projector during a lightning storm, or when it is left unattended or unused for long periods of time, unplug it from the wall outlet. This will prevent damage due to lightning and power surges.

Do not expose this unit to rain or use near water. For example, in a wet basement, near a swimming pool..., etc.

Do not use attachments not recommended by the manufacturer as they may result in hazards.

Do not place this projector on an unstable cart, stand, or table. The projector may fall, causing serious injury to a child or adult, and serious damage to the projector. Use only with a cart or stand recommended by the manufacturer, or sold with the projector. For wall or shelf mounting, use a tool such as a mounting kit to secure the projector.

An appliance and cart combination should be moved with care. Sudden stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.

Slots and openings in the rear and front of the cabinet are provided for ventilation, to insure reliable operation of the equipment and to protect it from overheating.

The openings should never be covered with cloth or other materials, and the bottom opening should not be blocked by placing the projector on a bed, sofa, rug, or other similar surface. This projector should never be placed near or over a radiator or heat register.

This projector should not be placed in a built-in installation such as a book case unless proper ventilation is provided.

Never push objects of any kind into this projector through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind onto the projector.

Do not install the projector near the ventilation duct of air-conditioning equipment.

This projector should be operated using only the type of power source indicated on the marking label. If you are not sure of the type of power supplied, contact the Canon Customer Support Center or local power company.

Do not overload wall outlets and extension cords as this can result in fire or electric shock. Do not allow anything to rest on the power cord. Do not locate this projector where the cord may be damaged by people walking on it.

Do not attempt to service this projector yourself as opening or removing covers may expose you to dangerous voltages or other hazards. Refer all servicing to qualified service personnel.

Unplug this projector from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- a When the power cord or plug is damaged or frayed.
- b If liquid has been spilled into the projector.
- c If the projector has been exposed to rain or water.
- d If the projector does not operate normally after following the operating instructions. Adjust only those controls that are covered in the operating instructions as improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the projector to normal operating condition.
- e If the projector has been dropped or the cabinet has been damaged.
- f When the projector exhibits a distinct change in performance-this indicates a need for servicing.

When replacement parts are required, be sure the service technician uses replacement parts specified by the manufacturer that have the same characteristics as the original parts. Unauthorized substitutions may result in fire, electric shock, or injury.

Upon completion of any service or repairs to this projector, ask the service technician to perform routine safety checks to determine that the projector is in safe operating condition.

AC Power Cord Requirement

The AC Power Cord supplied with this projector meets the requirements for use in the country you purchased it.

AC Power Cord for the United States and Canada:

The AC Power Cord used in the United States and Canada is listed by the Underwriters Laboratories (UL) and certified by the Canadian Standard Association (CSA).

The AC Power Cord has a grounding-type AC line plug. This is a safety feature to ensure the plug fits into the power outlet. Do not try to tamper with this safety feature. Should you be unable to insert the plug into the outlet, contact your electrician.

THE SOCKET-OUTLET SHOULD BE INSTALLED NEAR THE EQUIPMENT AND EASILY ACCESSIBLE.

For the U.S. and Canada, LAMP (S) INSIDE THIS PRODUCT CONTAIN MERCURY AND MUST BE RECYCLED OR DISPOSED OF ACCORDING TO LOCAL, MUNICIPAL, STATE, PROVINCIAL, OR FEDERAL LAWS.

For lamp recycling and disposal information please call 1-800-OK-CANON for the U.S. and Canada.

Only for European Union and EEA (Norway, Iceland and Liechtenstein)

These symbols indicate that this product is not to be disposed of with your household waste, according to the WEEE Directive (2012/19/EU), the Battery Directive (2006/66/EC) and/or national legislation implementing those Directives.

If a chemical symbol is printed beneath the symbol shown above, in accordance with the Battery Directive, this indicates that a heavy metal (Hg = Mercury, Cd = Cadmium, Pb = Lead) is present in this battery or accumulator at a concentration above an applicable threshold specified in the Battery Directive.

This product should be handed over to a designated collection point, e.g., on an authorized one-for-one basis when you buy a new similar product or to an authorized collection site for recycling waste electrical and electronic equipment (EEE) and batteries and accumulators. Improper handling of this type of waste could have a possible impact on the environment and human health due to potentially hazardous substances that are generally associated with EEE. Your cooperation in the correct disposal of this product will contribute to the effective usage of natural resources.

For more information about the recycling of this product, please contact your local city office, waste authority, approved scheme or your household waste disposal service or visit www.canon-europe.com/weee, or www.canon-europe.com/battery.

For CA, USA only

Included lithium battery contains Perchlorate Material - special handling may apply.

See www.dtsc.ca.gov/hazardouswaste/perchlorate/ for details.

Federal Communication Commission Notice

Multimedia Projector, Model: LX-MW500/LX-MU500

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio / TV technician for help.

The cable with a ferrite core provided with the projector must be used with this equipment in order to comply with Class B limits in Subpart B of Part 15 of the FCC Rules.

Use of a shielded cable is required to comply with class B limits in Subpart B of Part 15 of FCC Rules.

Do not make any changes or modifications to the equipment unless otherwise specified in the instructions. If such changes or modifications should be made, you could be required to stop operation of the equipment.

Canon U.S.A. Inc.

Tel No. 1-800-OK-CANON (1-800-652-2666)

Safety Symbols in this Manual

This section describes the safety symbols used in this manual. Important projector safety information is identified by the following symbols. Always observe the safety information by these symbols.

Warning

Denotes the risk of death or serious injury from improper handling if the information is not observed. To ensure safe use, always observe this information.

Caution

Denotes the risk of injury from improper handling if the information is not observed. To ensure safe use, always observe this information.

Precautions for Use

As this section contains important safety-related information, be sure to read the following carefully beforehand in order to use your projector correctly and safely.

Warning

If the following situations occur, turn the power off, remove the power plug from the power outlet and contact the Canon Customer Support Center. Failure to do so could cause a fire or result in an electric shock.

- If smoke is emitted
- If an unusual smell or noise is emitted
- If a loud noise is heard and the light source turns off
- If water or other liquid has entered the projector
- If metal or any other foreign material has entered the projector
- If the projector is knocked over or dropped and the cabinet is damaged

Warning

Pay attention to the following points for handling the power cord. Failure to pay attention to these points could cause a fire, electric shock or personal injury.

- Do not place any objects on the power cord and do not allow it to become trapped under the projector. The power cord may be damaged.
- Do not cover the power cord with a carpet.
- Do not excessively bend, twist, pull or make modifications to the power cord.
- Keep the power cord away from heaters and other sources of heat.
- Do not use the power cord when it is bent finely, coiled or bundled.
- Do not use a damaged power cord. If your power cord is damaged, contact the Canon Customer Support Center.
- Do not use any power cord other than the type that is included with this projector.
- Be sure to connect the ground wire of the power cord to ground. Failure to do so could result in an electric shock.
- Be sure to connect the ground wire before connecting the power plug to the outlet. Also when you disconnect the ground wire, be sure to unplug the power plug from the outlet beforehand.

Warning

Pay attention to the following point to prevent the small parts from being accidentally swallowed by children.

- Small parts such as the remote control battery, battery holder and adjustable feet that were detached may be accidentally swallowed by small children, which may result in choking. Parents/Guardians should keep them out of reach of children. If swallowed, consult a doctor immediately.

Warning

Pay attention to the following points regarding the power source, power plug and handling of the connector. Failure to do so could result in a fire, electric shock or personal injury.

- Do not use any power source with a voltage other than the voltage indicated (AC 100 – 240 V).
- Do not pull the power cord and be sure to hold the power plug or connector when removing. The cord could be damaged as a result.
- Do not insert any metal objects into the contact parts of the power plug or connector.
- Remove the power plug from the outlet before performing cleaning or maintenance of the projector.
- Do not remove the power plug or connector with wet hands.
- Insert the power plug and connector securely up to the base. Additionally, do not use a damaged power plug or an outlet that is loose.
- If using an extension cord attached to the outlet, make sure that the total electric power consumption of connected devices does not exceed the rated capacity.
- Periodically inspect the power plug and outlet and remove any dust or dirt from between the plug and the outlet.

Precautions for Installation

Warning

Pay attention to the following points regarding installation and handling of the projector. Failure to do so may cause a fire, electric shock or personal injury.

- Do not use the projector in a bathroom or shower room.
- Do not use the projector in rain or snow, by the sea, or in close proximity to a body of water.
- Do not place containers containing a liquid on top of the projector.
- Do not place the projector in any location where it will be exposed to oily smoke or steam, such as a kitchen work surface or table etc.
- Do not touch the projector itself, the power cord, or the cable if lightning strikes.

Warning

Pay attention to the following points regarding installation and handling of the projector. Failure to do so may cause a fire, electric shock or personal injury.

- Do not move the projector until you have switched off the power, removed the power plug from the power outlet and unplugged any other cables.
- Do not remove the cabinet from the projector or disassemble it. The interior of the projector contains high-voltage components as well as parts that are hot. These could cause an electric shock or burn. If inspection, maintenance or repair is required, contact the Canon Customer Support Center.
- Do not disassemble or modify the projector (including consumable parts) or the remote control.
- Do not insert any object into vents in the projector, such as the air intake vent or exhaust vents.
- Do not place a pressurized can in front of the exhaust vents. The pressure of the contents of the can may increase due to heat from the exhaust vents and this could result in an explosion.
- As strong light beams are emitted while the projector is in use, do not look directly into the projector lens. Doing so could cause an eye injury. Pay particular attention in preventing young children to do so.

RG2 IEC 62471-5:2015

- When giving a presentation in front of the projector while it is projecting an image, conduct your presentation from a position where your shadow will not be cast on the screen and where you do not feel blinded by light from the projector.

Caution

Pay attention to the following points regarding installation and handling of the projector.

- If the projector will not be used for a long period of time, be sure to remove the power plug from the power outlet to ensure safety. Failure to do so could cause a fire.
- The temperature of the cabinet around and above the exhaust vents can become hot during projector operation. Touching these areas during operation could cause burns to the hands. Do not touch these areas. Doing so may cause burns. Pay particular attention in preventing young children from touching these parts. Additionally, do not place any metal objects on these areas. Due to the heat from the projector, doing so could cause an accident or personal injury.

Caution

Pay attention to the following points regarding installation and handling of the projector.

- Do not place any heavy objects on top of the projector or sit/stand on it. Pay particular attention to prevent small children from doing so. The projector may be knocked over and this could result in damage or a personal injury.
- Do not place the projector on an unstable or slanted surface. Doing so may cause the projector to fall or be knocked over and could result in a personal injury.
- During projection, do not place anything directly in front of the lens. Doing so may cause burns or a fire. In addition, it may cause the projector to malfunction. To temporarily stop image, please use the "BLANK" function on the projector. See ["BLANK" on page 17, 18](#) for details
- When cleaning off dust or dirt from the projector lens etc., do not use any kind of spray that is flammable. As the temperature of the lamp inside the projector is high, it could ignite, causing a fire.
- If the projector is used for a long period of time, dust could accumulate inside the projector. This could cause a fire or malfunction. It is recommended that periodic maintenance of the projector be performed. For details of maintenance costs, contact the Canon Customer Support Center.

Precautions on the lamp

This projector uses a high-pressure mercury lamp, which must be handled carefully and correctly as described below.

The mercury lamp has the following characteristics.

- Impact, abrasion, or use after the lamp's useful life has expired may damage lamps (which may be accompanied by a loud noise) or cause them to burn out.
- Useful life of lamps varies widely from lamp to lamp and depending on the environment of use. Lamps are not guaranteed to last for the same amount of time, and some lamps may fail sooner than others.
- The lamp will gradually become darker over time.

Warning

When replacing the lamp, or when the lamp is damaged, pay attention to the following points. Failure to do so could result in an electric shock or personal injury.

Warning

- Be sure to remove the power plug from the power outlet before replacing the lamp.
- When the lamp is damaged, shards of glass may be scattered inside the projector. Contact the Canon Customer Support Center for cleaning and inspection of the projector interior and lamp replacement.

Caution

When handling the lamp, pay attention to the following points.

- Be sure not to handle the lamp immediately after it has been used. Be sure to switch off the power and wait for approximately 45 minutes for the lamp and the projector to cool down sufficiently. Failure to do so could result in a burn or personal injury due to heat from the lamp or projector.
- When an instruction to replace the lamp has been displayed (LAMP Indicator Displays (See ["Timing of replacing the lamp" on page 67](#) for details)), the possibility of the lamp breaking will increase. Replace the lamp with a new one as soon as possible.
- If the lamp is damaged, gas inside the lamp (containing mercury) and dust may be emitted from the exhaust vents. If this happens, immediately open the windows and doors to provide ventilation to the room. If you inhale any gas emitted from the lamp or it has come into contact with your eyes or mouth, consult a doctor immediately.
- When disposing of a used mercury lamp, dispose of it in the same way as a fluorescent lamp and in accordance with the local regulations where you live.

Precautions for the remote control battery

Warning

Pay attention to the following points regarding handling of the battery. Failure to do so could result in a fire or injury.

- Do not place the battery in a fire or apply heat to, short circuit or disassemble the battery.
- Do not attempt to recharge the battery.
- Insert the battery in the correct + / – positions.
- If any liquid leaks from the battery and comes into contact with skin, wash off thoroughly with water.

Caution for viewing 3D content

Caution

Pay attention to the following points when viewing 3D content.

- Photosensitive patients, patients with heart disease, pregnant women, elderly people, and people with serious illness and/or with a history of epilepsy should not view 3D content.
- We advise that you should refrain from viewing 3D content if you are in bad physical condition, need sleep or have been drinking alcohol.
- Stop watching 3D content if you experience the following symptoms. If you experience such symptom, immediately stop viewing 3D content and take a break until the symptom has subsided.
 - You see doubly-blurred images or you cannot view the image stereoscopically.
 - You feel fatigue or discomfort.
- Take breaks when viewing 3D content for an extended period of time. As this may cause eye fatigue. Viewing 3D content for an extended period of time or viewing them from an oblique angle can cause eye strain.
- Parents should accompany and monitor their children as children cannot properly express discomfort with 3D content viewing. Children who are six year of age or younger should not view 3D content.
- The optimum 3D viewing distance from the screen is about 3 times of the vertical screen size or more and your eyes should be level with the screen.

For Safe Use

Pay attention to the following points when carrying or transporting the projector.

- This projector is a precision instrument. Do not knock it over or subject it to impacts. Doing so may cause a malfunction.
- If the packaging or shock-absorbent materials are damaged at the time of purchase, do not reuse them for transporting or shipping the projector. Protection of the projector cannot be guaranteed if the packaging or shock-absorbent materials are damaged. Fragments from shock-absorbent material may also enter the interior of the projector which could cause a malfunction.
- Disconnect the cables connected to the projector. Carrying the projector with the cables attached may cause an accident.
- Retract the adjustable feet.

Pay attention to the following points when installing or using the projector.

- Be sure to install the projector in a location where the air intake and exhaust vents are separated from the wall by more than 50 cm (1.6'). Failure to do so could cause a malfunction.
- Do not install the projector in a location that is damp, or where there is a lot of dust, oily smoke or tobacco smoke. Doing so could cause contamination of optical components such as the lens and the mirror and may result in deterioration of image quality.
- Do not touch the lens with bare hands. Doing so may result in deterioration of image quality.
- If the projector is suddenly moved from a location where the temperature is low to a location where the temperature is high, or if the temperature in the location where the projector is installed increases suddenly, moisture in the air could cause condensation to form on the projector lens or mirror. This may cause a blurred image. Wait until the condensation has evaporated for the image projected to return to normal.
- Do not install the projector in a location where the temperature is high or low. Doing so may cause a malfunction.

LX-MW500

Operating temperature: 0°C to 40°C, Operating humidity level: 10% to 90% (non-condensing)

Storage temperature: -20°C to 60°C

LX-MU500

Operating temperature: 0°C to 40°C, Operating humidity level: 10% to 80% (non-condensing)

Storage temperature: -20°C to 60°C

- Do not install the projector near high-voltage electrical power lines or an electrical power source.
- Do not use the projector on a soft surface such as carpet or sponge mat, etc. Doing so could cause heat to build up inside the projector and this could result in a malfunction.
- Do not block the air intake or exhaust vents of the cooling fan. Doing so could cause heat to build up inside the projector and may cause a malfunction.
- Do not place any objects on top of the projector that may change shape or color due to heat.
- When using the projector at altitudes greater than 1500 m (4921'), please turn on the High Altitude Mode.
- Please do not brush or rub the surface of the top plate of the projector. The surface may be damaged.

Contents of package

Projector

Power cord 1.8 m (70.8")

Computer cable 1.8 m (70.8")
(5K.1VC09.501)

Front/upper side

Rear/lower side

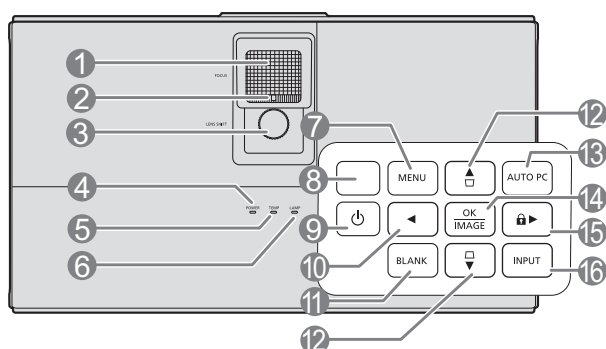

1. External control panel
(See "Projector" on page 17 for details.)
2. Lamp cover
3. Vent (heated air exhaust)
4. Speaker
5. Adjuster foot
6. Projection lens
7. Front IR remote sensor
8. Lens shift wheel
9. Focus ring and Zoom ring
10. Vent (air intake)
11. Filter cover
12. LAN port/HDBaseT input terminal
13. CONTROL port
14. SERVICE port**
15. USB power out
16. HDMI input terminal
17. HDMI/MHL input terminal
18. Monitor output terminal
19. PC input terminal x 2
20. S-Video input terminal
21. Audio input terminal (RCA)
22. Audio input terminal (stereo mini jack)
23. Audio output terminal (stereo mini jack)
24. Video input terminal
25. Kensington lock
26. Security bar
27. AC power cord inlet
28. Ceiling mount holes
29. Release button of the filter cover

** By connecting the projector and computer via USB, you can operate the computer from the remote controller (Page UP/Page DOWN).

Controls and functions

Projector

1. Focus ring

Adjusts the focus of the projected image. See ["Fine-tuning the image size and clarity" on page 38](#) for details.

2. Zoom ring

Adjusts the size of the image. See ["Fine-tuning the image size and clarity" on page 38](#) for details.

3. Lens shift wheel

Shifts the projection lens vertically. See ["Shifting the projection lens vertically" on page 25](#) for details.

4. POWER indicator light

Lights up or flashes when the projector is under operation. See ["Indicators" on page 71](#) for details.

5. TEMPerature indicator light

Lights up red if the projector's temperature becomes too high. See ["Indicators" on page 71](#) for details.

6. LAMP indicator light

Indicates the status of the lamp. Lights up or flashes when the lamp has developed a problem. See ["Indicators" on page 71](#) for details.

7. MENU

Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings. See ["Using the menus" on page 34](#) for details.

8. Top IR remote sensor

9. POWER (ON/STANDBY)

Toggles the projector between standby mode and on. See ["Starting up the projector" on page 33](#) and ["Shutting down the projector" on page 47](#) for details.

10. Left

11. BLANK

Used to hide the screen picture. See ["Hiding the image" on page 46](#) for details.

12. Keystone/Arrow keys (/ Up, / Down)

Manually corrects distorted images resulting from an angled projection. See ["Correcting keystone" on page 39](#) for details.

13. AUTO PC

Automatically determines the best picture timings for the displayed image. See ["Auto-adjusting the image" on page 38](#) for details.

14. OK/IMAGE

Enacts the selected On-Screen Display (OSD) menu item.

Selects an available picture setup mode. See ["Selecting a image mode" on page 42](#) for details.

15. Right/

Activates panel key lock. See ["Locking control keys" on page 46](#) for details.

When the On-Screen Display (OSD) menu is activated, the #10, #12, and #15 keys are used as directional arrows to select the desired menu items and to make adjustments. See ["Using the menus" on page 34](#) for details.

16. INPUT

Displays the source selection bar. See ["Switching input signal" on page 37](#) for details.

When you are under the MHL connection mode and the projector OSD is off, these buttons are available for controlling your smart device: arrow keys, OK/IMAGE, AUTO PC.

10, 12 and 15: arrows keys

Arrows keys are available for controlling your smart device.

14. OK/IMAGE

Use the key to confirm the selection on the OSD of your smart device.

13. AUTO PC

Use the key to return or exit the OSD menu of your smart device.

To enter the MHL connection mode, connect a MHL device (See ["Connecting a MHL-compatible smart device" on page 28](#) for details.) and switch the input signal to HDMI/MHL (See ["Switching input signal" on page 37](#) for details.).

Attention of the MHL device connection (See ["Connecting a MHL-compatible smart device" on page 28](#) for details.)

Remote control: LV-RC08

1. POWER (ON/STANDBY)

Toggles the projector between standby mode and on. See ["Starting up the projector" on page 33](#) and ["Shutting down the projector" on page 47](#) for details.

2. INPUT

Displays the source selection bar. See ["Switching input signal" on page 37](#) for details.

3. Left

Selects the desired menu items and makes adjustments. See ["Using the menus" on page 34](#) for details.

4. BLANK

Used to hide the screen picture. See ["Hiding the image" on page 46](#) for details.

5. TIMER

Activates or adjusts some basic settings of an on-screen timer. See ["Using the TIMER key" on page 45](#) for details.

6. D.ZOOM (+, -)**

Magnifies or reduces the projected picture size. See ["Magnifying and searching for details" on page 40](#) for details.

7. MUTE

Temporarily mutes the audio. See ["Adjusting the sound" on page 47](#) for details.

8. MENU

Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings. See ["Using the menus" on page 34](#) for details.

9. Keystone/Arrow keys (/▲Up, /▼Down)

Manually corrects distorted images resulting from an angled projection. See ["Correcting keystone" on page 39](#) for details.

10. AUTO PC

Automatically determines the best picture timings for the displayed image. See ["Auto-adjusting the image" on page 38](#) for details.

11. Right/

Activates panel key lock. See ["Locking control keys" on page 46](#) for details.

When the On-Screen Display (OSD) menu is activated, the #3, #9 and #11 keys are used as directional arrows to select the desired menu items and to make adjustments. See ["Using the menus" on page 34](#) for details.

12. FREEZE

Freezes the projected image. See ["Freezing the image" on page 46](#) for details.

13. OK/IMAGE

Enacts the selected On-Screen Display (OSD) menu item.

Selects an available picture setup mode. See ["Selecting a image mode" on page 42](#) for details.

14. VOL keys (+, -)

Adjusts the sound level. See ["Adjusting the sound" on page 47](#) for details.

When you are under the MHL connection mode and the projector OSD is off, these buttons are available for controlling your smart device: arrow keys, OK/IMAGE, AUTO PC.

3, 9 and 11: arrows keys

Arrows keys are available for controlling your smart device.

10. AUTO PC

Use the key to return or exit the OSD menu of your smart device.

13. OK/IMAGE

Use the key to confirm the selection on the OSD of your smart device.

To enter the MHL connection mode, connect a MHL device (See ["Connecting a MHL-compatible smart device" on page 28](#) for details.) and switch the input signal to HDMI/MHL (See ["Switching input signal" on page 37](#) for details.).

Attention of the MHL device connection (See ["Connecting a MHL-compatible smart device" on page 28](#) for details.)

** When the projector and computer are connected via USB, the function (Page UP/Page DOWN) which operates the computer from the remote controller is set.

Using the remote control for the first time

Pull the tab before using the remote control.

Remote control effective range

Infra-Red (IR) remote control sensors are located on the front and top of the projector. The distance between the remote control and the sensors should not exceed 8 meters (~ 26 feet).

Make sure that there are no obstacles between the remote control and the IR sensors on the projector that might obstruct the infra-red beam.

- ⚠ • **You may not be able to perform operations if there are any obstacles between the remote control and the projector.**
- **You may not be able to operate the remote control if direct sunlight or strong light is shining onto the remote IR receiver.**

Replacing the remote control battery

1. Pull out the battery holder.

👉 **Please follow the illustrated instructions. Push and hold the locking arm while pulling out the battery holder.**

2. Insert the new battery in the holder. Note the positive polarity should face outward.
3. Push the holder into the remote control.

- ⚠ • **Risk of explosion if battery is replaced by an incorrect type.**
- **Dispose of used batteries according to the instructions.**
- **Use of a battery of wrong type may cause explosion. Use Lithium coin battery, type CR2025 only.**
- **Dispose of used batteries according to your local regulations. Discard used battery promptly. Batteries may explode if mistreated. Do not recharge, disassemble, or dispose of in fire.**
- **Be careful in handling the battery according to the instructions.**
- **Load the battery with its positive (+) and negative (-) sides correctly oriented as indicated on the remote control.**
- **Keep batteries out of reach of children and pets.**
- **The remote control battery and battery holders can be a choking hazard if swallowed accidentally by small children. Make sure these are placed out of the reach of children. If they are swallowed accidentally, contact a physician immediately.**
- **Remove the battery if the remote control is not used for a long time.**
- **Never put battery in mouth for any reason as it can easily be accidentally swallowed. If battery is accidentally swallowed, contact your physician or your poison control center.**
- **Dispose of the used battery with cellophane tape wrapping both ends of it.**
- **If any liquid leaks from the battery and comes into contact with skin, wash it off thoroughly with water.**

Third party software support

Canon Inc., Canon's affiliated companies, as well as sales companies do not offer any support services for these programs. We are unable to respond to questions or inquiries from you or any other parties regarding these programs.

Positioning your projector

Choosing a location

Your room layout or personal preference will dictate which installation location you select. Take into consideration the size and position of your screen, the location of a suitable power outlet, as well as the location and distance between the projector and the rest of your equipment.

Your projector is designed to be installed in one of the possible installation locations:

1. Front Table

Select this location with the projector placed near the floor in front of the screen. This is the most common way to position the projector for quick setup and portability.

2. Rear Table

Select this location with the projector placed near the floor behind the screen.

Note that a special rear projection screen is required.

Set **Rear Table** in the **SYSTEM SETUP: Basic > Image Flip H/V** menu after you turn the projector on.

3. Rear Ceiling

Select this location with the projector suspended upside-down from the ceiling behind the screen.

Note that a special rear projection screen and qualified projector ceiling mount kit are required for this installation location.

Set **Rear Ceiling** in the **SYSTEM SETUP: Basic > Image Flip H/V** menu after you turn the projector on.

4. Front Ceiling

Select this location with the projector suspended upside-down from the ceiling in front of the screen.

Purchase a qualified projector ceiling mount kit from your dealer to mount your projector on the ceiling.

Set **Front Ceiling** in the **SYSTEM SETUP: Basic > Image Flip H/V** menu after you turn the projector on.

For ceiling mounting, you need the ceiling mount kit to be available for this projector. Ask a specialist for installation. For details, consult your dealer.

- The warranty on this projector does not cover any damage caused by use of any non-recommended ceiling mount kit or installation of the ceiling mount kit in an improper location.
- When the projector is mounted on the ceiling, images may appear darker than those projected in the case of tabletop mounting. This isn't a product malfunction.

Obtaining a preferred projected image size

The distance from the projector lens to the screen, the zoom setting (if available), and the video format each factors in the projected image size.

16:10 is the native aspect ratio of LX-MU500/LX-MW500. To be able to project a complete 16:9 (widescreen) aspect ratio image, the projector can resize and scale a widescreen image to the projector's native aspect width. This will result in a proportionally smaller height equivalent to 90% of the projector's native aspect height.

4:3 aspect image in a 16:10 aspect display area

16:9 aspect image scaled to a 16:10 aspect display area

Thus, a 16:9 aspect image will not utilize 10% of the height of a 16:10 aspect image displayed by this projector. This will be seen as darkened (unlit) bars along the top and bottom (vertical 5% height respectively) of the 16:10 projection display area whenever displaying a scaled 16:9 aspect image in the vertical center of the 16:10 projection display area.

Install the projector on a flat surface such as a table with the lens parallel to the screen. This prevents image distortion caused by angled projections (or projecting onto angled surfaces).

The modern digital projector does not project directly forward (like older style reel-to-reel film projectors did). Instead, digital projectors are designed to project at a slightly upward angle above the horizontal plane of the projector. This is so that they can be readily placed on a table and will project forward and upwards onto a screen positioned so that the bottom edge of the screen is above the level of the table (and everyone in the room can see the screen).

You can see from the diagram on page [24](#), that this type of projection causes the bottom edge of the projected image to be vertically offset from the horizontal plane of the projector.

If the projector is positioned further away from the screen, the projected image size increases, and the vertical offset also increases proportionately.

When determining the position of the screen and projector, you will need to account for both the projected image size and the vertical offset dimension, which are directly proportional to the projection distance.

When fine streaks are seen on projected images

This is due to interference with the screen surface and is not a mal-function. Replace the screen or displace the focus a little.

How to determine the position of the projector for a given screen size

1. Select your image size.
2. Refer to the table and find the closest match to your image size in the left columns labeled "[Image size](#)". Using this value, look across this row to the right to find the corresponding average distance from screen value in the column labeled "[Distance from the screen: L](#)". This is the projection distance.
3. On that same row, look across to the right column and make note of the "[Vertical offset \(Hd\)](#)" value. This will determine the final vertical offset placement of the projector in relation to the edge of the image.
4. The recommended position for the projector is aligned perpendicular to the horizontal center of the screen, at the distance from the screen determined in step 2 above, and offset by the value determined in step 3 above.

<Example>

LX-MU500: If you are using a 16:10 aspect ratio, 100-inch screen, distance from the screen is 2.4 m and with a vertical offset of 7 cm at Zoom position wide.

The projected image may be distorted if the projector is installed tilting upward or downward. Use the Keystone function to correct the distortion. See "[Correcting keystone](#)" on [page 39](#) for details.

How to determine the recommended screen size for a given distance

This method can be used for situations where you have purchased this projector and would like to know what screen size will fit in your room.

1. Measure the distance between the projector and where you want to position the screen. This is the projection distance.
2. Refer to the table and find the closest match to your measurement in the distance from the Image size column. If the min and max values are available on the table, check that your measured distance is between the min and max distances listed on either side of the average distance value.
3. Using this value, look across that row to the left to find the corresponding "[Image size](#)". That is the projected image size of the projector at that projection distance.
4. On that same row, look across to the right column and make note of the "[Vertical offset \(Hd\)](#)" value. This will determine the final placement of the screen in relation to the horizontal plane of the projector.

<Example>

LX-MU500: If your measured projection distance was 2.5 m and your screen aspect ratio is 16:10, the closest match in the "[Distance from the screen: L](#)" column is 2.2 m to 3.5 m. Looking across this row shows that a 70 to 100-inch screen is required.

Layout of the projector

Image size varies depending on the distance between the screen and the projector.

Front projection

L: Between the screen and the front edge of the projector
H: Height of the projected image

LX-MW500 (16:10)

Image size						Distance from the screen: L				Vertical offset (Hd)	
Diagonal Size		Width: W		Height: H		Shortest (Wide)		Longest (Tele)			
inch	cm	inch	cm	inch	cm	inch	m	inch	m	inch	cm
60	152	51	129	32	81	57	1.4	91	2.3	1.6	4
70	178	59	151	37	94	67	1.7	106	2.7	1.9	5
80	203	68	172	42	108	76	1.9	122	3.1	2.1	5
90	229	76	194	48	121	86	2.2	137	3.5	2.4	6
100	254	85	215	53	135	95	2.4	152	3.9	2.6	7
120	305	102	258	64	162	114	2.9	182	4.6	3.2	8
150	381	127	323	79	202	143	3.6	228	5.8	4.0	10
200	508	170	431	106	269	190	4.8	-	-	5.3	13
240	610	204	517	127	323	228	5.8	-	-	6.4	16

LX-MU500 (16:10)

Image size						Distance from the screen: L				Hd	
Diagonal Size		Width: W		Height: H		Shortest (Wide)		Longest (Tele)			
inch	cm	inch	cm	inch	cm	inch	m	inch	m	inch	cm
60	152	51	129	32	81	54	1.4	87	2.2	0.8	2
70	178	59	151	37	94	63	1.6	101	2.6	0.9	2
80	203	68	172	42	108	72	1.8	116	2.9	1.1	3
90	229	76	194	48	121	81	2.1	130	3.3	1.2	3
100	254	85	215	53	135	91	2.3	145	3.7	1.3	3
120	305	102	258	64	162	109	2.8	174	4.4	1.6	4
150	381	127	323	79	202	136	3.4	217	5.5	2.0	5
200	508	170	431	106	269	181	4.6	-	-	2.6	7
240	610	204	517	127	323	217	5.5	-	-	3.2	8

 The above figures are approximate and may be slightly different from the actual measurements. Canon recommends that if you intend to permanently install the projector, you should physically test the projection size and distance using the actual projector in suit before you permanently install it, so as to make allowance for this projector's optical characteristics. This will help you determine the exact mounting position so that it best suits your installation location.

Shifting the projection lens vertically

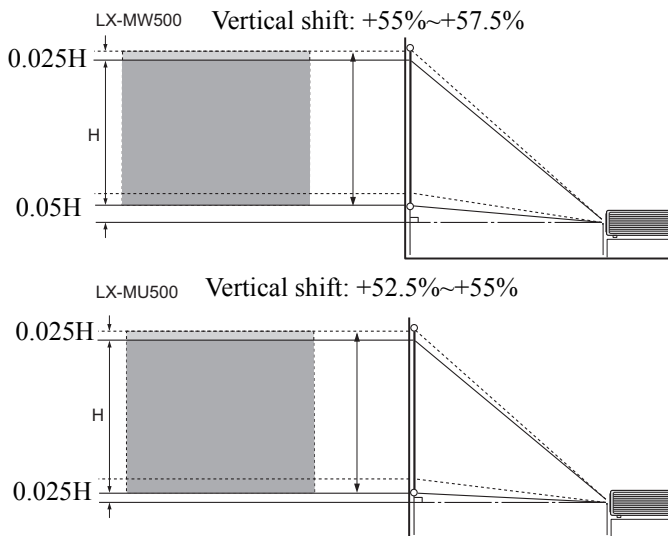

The vertical lens shift control provides flexibility for installing your projector. It allows the projector to be positioned slightly above or below the top level of the projected images.

Use the wheel to shift the projection lens upwards or downwards within the allowable range depending on your desired image position.

To use the lens shift wheel:

Turn the wheel to adjust the projected image position.

Lens shift adjustable range

- **Do not over-tighten the wheel.**
- **Lens shift adjustment does not result in a degraded picture quality.**

Connection

When connecting a signal source to the projector, be sure to:

1. Turn all equipment off before making any connections.
2. Use the correct signal cables for each source.
3. Ensure the cables are firmly inserted.

- **See the user's manual of each device for details about its connections.**
- **Contact your dealer for details about its connections.**
- **In the connections shown below, some cables may not be included with the projector. They are commercially available from electronics stores.**

Connecting a computer or monitor

Connecting a computer

The projector provides a PC input terminal that allows you to connect it to both IBM® compatibles and Macintosh® computers. A Mac adapter is needed if you are connecting legacy version Macintosh computers.

To connect the projector to a notebook or desktop computer:

1. Take the supplied Computer cable and connect one end to the D-Sub output terminal of the computer.
2. Connect the other end of the Computer cable to the **COMPUTER-1** or **COMPUTER-2** signal input terminal of the projector.
3. If you wish to make use of the projector speaker in your presentations, take a suitable audio cable and connect one end of the cable to the audio output terminal of the computer, and the other end to the **AUDIO IN** terminal of the projector.
4. If you wish, you can use another suitable audio cable and connect one end of the cable to the **AUDIO OUT** terminal of the projector, and the other end to your external speakers (not supplied).

Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. See ["Adjusting the sound" on page 47](#) for details.

The final connection path should be like that shown in the following diagram:

- **Many notebooks do not turn on their external video ports when connected to a projector. Usually a key combo like FN + F3 or CRT/LCD key turns the external display on/off. Locate a function key labeled CRT/LCD or a function key with a monitor symbol on the notebook. Press FN and the labeled function key simultaneously. Refer to your notebook's documentation to find your notebook's key combination.**

- **When you use a longer Computer cable instead of the provided cable, the image may not be projected correctly.**
- **Some computers require additional connectors or analog RGB output adapters to be connected with this projector.**

Connecting a monitor

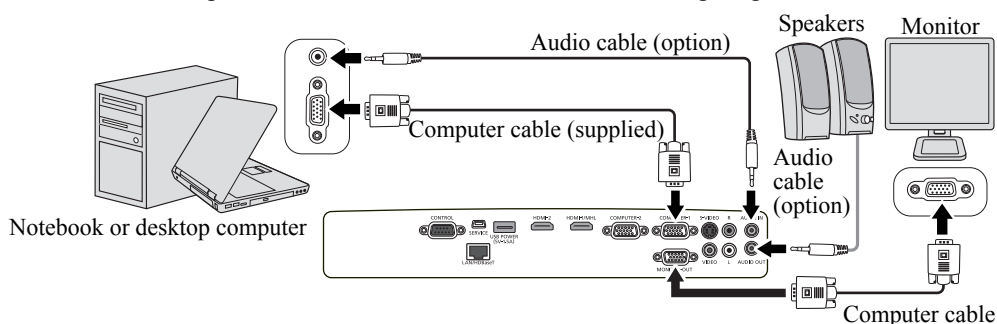

If you want to view your presentation close-up on a monitor as well as on the screen, you can connect the **MONITOR-OUT** signal output jack on the projector to an external monitor.

To connect the projector to a monitor:

1. Take the supplied Computer cable and connect one end to the D-Sub output terminal of the computer.
2. Connect the other end of the Computer cable to the **COMPUTER-1** signal input terminal of the projector.
3. Take another Computer cable and connect one end to the monitor and the other end to the **MONITOR-OUT** output terminal of the projector.
4. If you wish to make use of the projector speaker in your presentations, take a suitable audio cable and connect one end of the cable to the audio output terminal of the computer, and the other end to the **AUDIO IN** terminal of the projector.
5. If you wish, you can use another suitable audio cable and connect one end of the cable to the **AUDIO OUT** terminal of the projector, and the other end to your external speakers (not supplied).

Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. See ["Adjusting the sound" on page 47](#) for details.

The final connection path should be like that shown in the following diagram:

 Images may not be displayed correctly depending on the type of the input signal and the type of the cable.

Connecting Video source devices

You can connect your projector to various Video source devices that provide any one of the following output sockets:

- HDMI/MHL
- Component Video
- S-Video
- Video (composite)

You need only connect the projector to a Video source device using just one of the above connecting methods, however each provides a different level of video quality. The method you choose will most likely depend upon the availability of matching terminals on both the projector and the Video source device as described below:

HDMI (High-Definition Multimedia Interface) supports uncompressed video data transmission between compatible devices like DTV tuners, DVD players and displays over a single cable. It provides pure digital viewing experience. See ["Connecting an HDMI device" on page 28](#) for how to connect the projector to an HDMI device.

Digital TV tuner and DVD players output Component Video natively, so if available on your devices, this should be your connection method of choice in preference to (composite) Video. See ["Connecting a Component Video source device" on page 29](#) for how to connect the projector to a component video device.

If you have both composite Video and S-Video output terminals on your Video source device, you should elect to use the S-Video option. See ["Connecting an S-Video source device" on page 30](#) for how to connect the projector to an S-Video device.

If you have only composite Video output terminals on your Video source device, connect to Composite Video input. See "[Connecting a composite Video source device](#)" on page 31 for how to connect the projector to a composite Video device.

Connecting an HDMI device

You should use an HDMI cable when making connection between the projector and HDMI devices.

To connect the projector to an HDMI device:

1. Take an HDMI cable and connect one end to the HDMI output terminal of the video device.
 2. Connect the other end of the cable to the **HDMI-1/MHL** or **HDMI-2** input terminal on the projector.
- The final connection path should be like that shown in the following diagram:

☞ When you connect this projector and an HDMI device (such as a DVD player) via the HDMI terminal, black color may appear dark and deep, depending on the type of the connected device.

- This depends on the black level setting of the connected device. There are two kinds of methods to digitally transfer image data, in which different black level settings are employed respectively. Therefore, the specifications of the signals output from DVD players differ, depending on the type of the digital data transfer method they use.
- Some DVD players are provided with a function to switch the methods to output digital signals. When your DVD player is provided with such function, set it as follows.
EXPAND or ENHANCED -> NORMAL
- See the User's Manual of your DVD player for details.
- When you switch to HDMI input, the projected picture may display wrong colors for about 1 second. This is not product malfunction.

Connecting a MHL-compatible smart device

You should use a MHL cable when making connection between the projector and the smart devices.

To connect the projector to a smart device:

1. Take an MHL cable and connect one end to the MHL output terminal of the smart device.
2. Connect the other end of the cable to the **HDMI-1/MHL** input terminal on the projector.

The final connection path should be like that shown in the following diagram:

☞ When a MHL-compatible smart device is connected and the input signal is HDMI/MHL, some buttons on the projector and remote control are available for controlling your smart device. See "[Controls and functions](#)" on page 17 for details.

- Use a MHL cable (available on the market) and MHL-HDMI conversion adapter (available on the market) that comply with the MHL standard. When non-compliant items are used, image projection may not be possible, or the connected device may malfunction or generate heat.
- Images may not be displayed correctly depending on the connected device type and the settings.
- Operation may differ or the intended operation may not be performed when using the controls on the projector and the remote controller, depending on the connected device.
- When using a MHL-HDMI conversion adapter (available on the market), the connected device cannot be operated using the controls on the projector and the remote controller.
- When images cannot be projected properly, disconnect and reconnect the MHL cable.
- Operation is not guaranteed for all connected devices.

Connecting a Component Video source device

Examine your Video source device to determine if it has a set of unused Component Video output sockets available:

- If so, you can continue with this procedure.
- If not, you will need to reassess which method you can use to connect to the device.

To connect the projector to a Component Video source device:

1. Take a Component Video to RGB (D-Sub) adaptor cable and connect the end with 3 RCA type connectors to the Component Video output sockets of the Video source device. Match the color of the plugs to the color of the sockets; green to green, blue to blue, and red to red.
2. Connect the other end of the Component Video to RGB (D-Sub) adaptor cable (with a D-Sub type connector) to the **COMPUTER-1** or **COMPUTER-2** terminal on the projector.
3. If you wish to make use of the projector speaker in your presentations, take a suitable audio cable and connect one end of the cable to the audio output terminal of the computer, and the other end to the **AUDIO IN** terminal of the projector.
4. If you wish, you can use another suitable audio cable and connect one end of the cable to the **AUDIO OUT** terminal of the projector, and the other end to your external speakers (not supplied).

Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. See ["Adjusting the sound" on page 47](#) for details.

The final connection path should be like that shown in the following diagram:

If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the Video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.

Connecting an S-Video source device

Examine your Video source device to determine if it has an unused S-Video output terminal available:

- If so, you can continue with this procedure.
- If not, you will need to reassess which method you can use to connect to the device.

To connect the projector to an S-Video source device:

1. Take an S-Video cable and connect one end to the S-Video output terminal of the Video source device.
 2. Connect the other end of the S-Video cable to the **S-VIDEO** terminal on the projector.
 3. If you wish to make use of the projector speaker in your presentations, take a suitable audio cable and connect one end of the cable to the audio output terminal of the computer, and the other end to the **L/R** terminal of the projector.
 4. If you wish, you can use another suitable audio cable and connect one end of the cable to the **AUDIO OUT** terminal of the projector, and the other end to your external speakers (not supplied).
- Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. See ["Adjusting the sound" on page 47](#) for details.

The final connection path should be like that shown in the following diagram:

- If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the Video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.
- If you have already made a Component Video connection between the projector and this S-Video source device, you need not connect to this device using an S-Video connection as this makes an unnecessary second connection of poorer picture quality. See ["Connecting Video source devices" on page 27](#) for details.
- Do not connect two signals such as Video and HDMI from a single output device.

Connecting a composite Video source device

Examine your Video source device to determine if it has a set of unused composite Video output sockets available:

- If so, you can continue with this procedure.
- If not, you will need to reassess which method you can use to connect to the device.

To connect the projector to a composite Video source device:

1. Take a Video cable and connect one end to the composite Video output terminal of the Video source device.
2. Connect the other end of the Video cable to the **VIDEO** terminal on the projector.
3. If you wish to make use of the projector speaker in your presentations, take a suitable audio cable and connect one end of the cable to the audio output terminal of the computer, and the other end to the **L/R** terminal of the projector.
4. If you wish, you can use another suitable audio cable and connect one end of the cable to the **AUDIO OUT** terminal of the projector, and the other end to your external speakers (not supplied).

Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. See ["Adjusting the sound" on page 47](#) for details.

The final connection path should be like that shown in the following diagram:

- If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the Video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.
- You need only connect to this device using a composite Video connection if Component Video and S-Video inputs are unavailable for use. See ["Connecting Video source devices" on page 27](#) for details.
- Do not connect two signals such as Video and HDMI from a single output device.

Connecting multiple sources through HDBaseT

HDBaseT is a connectivity standard that combines HD digital video, audio, Ethernet, and various control signals. These signals are transmitted with one CAT5e (or above) cable up to 100 meters in length. With the use of HDBaseT switching matrix (commercially available), you may connect multiple sources to your projector with HDBaseT connection.

- **When connecting the RJ45 cable, avoid coiling and intertwining the cable as it may cause signal noise or interruption.**
- **The illustration below is for reference only, actual layout may vary.**

- **Use a shielded LAN cable rated at CAT5e or better.**
- **Maximum transmission distance is 100 m.**
- **However, maximum transmission distance may be shorter in some environments.**
- **Do not use the LAN cable when it is coiled or bundled.**
- **Inserting or removing the LAN cable during projection may cause noise.**
- **Connectivity with all HDBaseT transmitters on the market is not guaranteed.**
- **Some HDBaseT transmitters may not enable correct projection when used to connect source equipment to the projector.**
- **Commands cannot be received through HDBaseT when the projector is in standby mode.**

Starting up the projector

1. Plug the power cord into the projector and into a wall socket. Turn on the wall socket switch (where fitted). Check that the **POWER indicator light** on the projector lights orange after power has been applied.

- **Ask your installation specialist to provide an Earth leakage breaker. When you do not use the projector, be sure to shut down the main power by the breaker.**
- **Please use the original accessories (e.g. power cord) only with the device to avoid possible dangers such as electric shock and fire.**
- **In order to ensure the safety in case of trouble with the projector, use an electrical outlet having an earth leakage breaker to supply the power to the projector. If you do not have such outlet, ask your dealer to install it.**

2. Press **POWER** on the projector or remote control to start the projector. The **POWER indicator light** flashes green and stays green when the projector is on.
The start up procedure takes about 30 seconds. In the later stage of start up, a startup logo is projected.

(If necessary) Rotate the focus ring to adjust the image clearness.

- **If the projector is still hot from previous activity, it will run the cooling fans for approximately 90 seconds before energizing the lamp.**
 - **To maintain the lamp life, once you turn the projector on, wait at least 5 minutes before turning it off.**
 - **After **POWER** is pressed, the image may flicker before the lamp becomes stable. This is not a product malfunction.**
3. If the projector is activated for the first time, select your OSD language following the on-screen instructions.
 4. If you are prompted for a password, press the arrow keys to enter a six-digit password. See ["Utilizing the password function" on page 35](#) for details.
 5. Switch all of the connected equipment on.
 6. The projector will start to search for input signals. The current input signal being scanned appears in the upper left corner of the screen. If the projector doesn't detect a valid signal, the message **'No Signal'** will be displayed until an input signal is found.
You can also press **INPUT** on the projector or remote control to select your desired input signal. See ["Switching input signal" on page 37](#) for details.

Please select language		
English	한국어	Nederlands
Français	Svenska	Română
Deutsch	Türkçe	Norsk
Italiano	Čeština	Dansk
Español	Português	Polski
Русский	ไทย	Қазақстан
繁體中文	Suomi	Tiếng Việt
简体中文	Magyar	
日本語	हिन्दी	

Press OK to Confirm, MENU to leave

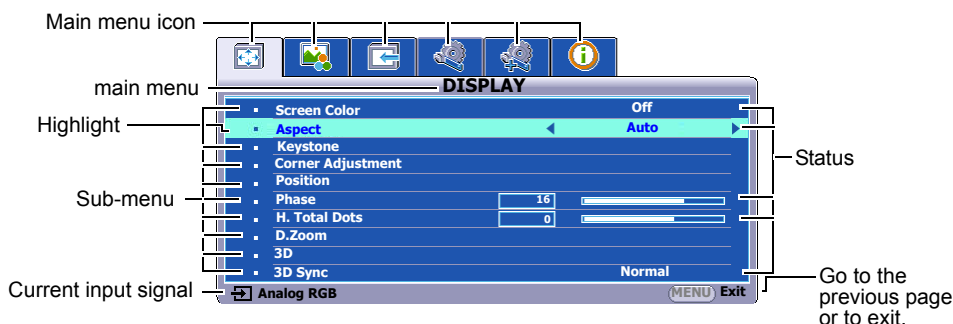

- **If the frequency/resolution of the input signal exceeds the projector's operating range, you will see the message 'Out of Range' displayed on a blank screen. Please change to an input signal which is compatible with the projector's resolution or set the input signal to a lower setting. See ["Timing chart" on page 76](#) for details.**

Using the menus

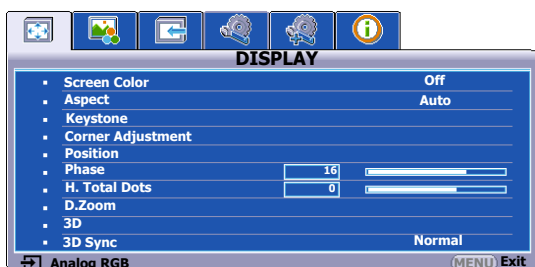

The projector is equipped with On-Screen Display (OSD) menus for making various adjustments and settings.

Below is the overview of the OSD menu.

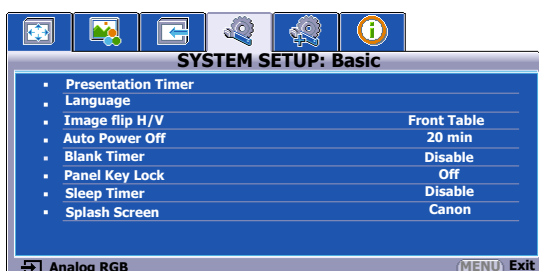

Below is an example about how to set the OSD language.

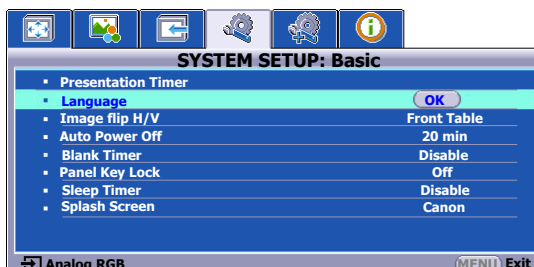

1. Press **MENU** on the projector or remote control to turn the OSD menu on.

2. Use **◀/▶** to highlight the **SYSTEM SETUP: Basic** menu.

3. Press **▼** to highlight **Language** and press **OK/IMAGE**.

4. Press **◀/▲/▼/▶** to select a preferred language and press **OK/IMAGE**.
5. Press **MENU** on the projector or remote control to leave and save the settings.

Utilizing the password function

For security purposes and to help prevent unauthorized use, the projector includes an option for setting up password security. The password can be set through the On-Screen Display (OSD) menu. For details of the OSD menu operation, please refer to ["Using the menus" on page 34](#).

☞ **You will be inconvenienced if you activate the power-on lock functionality and subsequently forget the password. Print out this manual (if necessary) and write the password you used in this manual, and keep the manual in a safe place for later recall.**

Setting a password

☞ **Once a password has been set, the projector cannot be used unless the correct password is entered every time the projector is started.**

1. Open the OSD menu and go to the **SYSTEM SETUP: Advanced > Security Settings** menu. Press **OK/IMAGE**. The **Security Settings** page is displayed.
2. Highlight **Power On Lock** and select **On** by pressing **◀/▶**.
3. As pictured to the right, the four arrow keys (**▲**, **▶**, **▼**, **◀**) respectively represent 4 digits (1, 2, 3, 4). According to the password you desire to set, press the arrow keys to enter six digits for the password.
4. Confirm the new password by re-entering the new password. Once the password is set, the OSD menu returns to the **Security Settings** page.

☞ **The digits being input will be displayed as asterisks on-screen. Do make a note of your password, and keep the note in a safe place for later recall.**

5. To leave the OSD menu, press **MENU**.

If you forget the password

If the password function is activated, you will be asked to enter the six-digit password every time you turn on the projector. If you enter the wrong password, the password error message as pictured to the right is displayed lasting for three seconds, and the message **'INPUT PASSWORD'** follows. You can retry by entering another six-digit password, or if you did not record the password in this manual, and you absolutely do not remember it, you can reset the password function. See ["Resetting the password function" on page 35](#) for details.

If you enter an incorrect password 5 times in succession, the projector will automatically shut down in a short time.

Resetting the password function

1. Turn the projector off. See ["Shutting down the projector" on page 47](#) for details.
2. Unplug the power cord.
3. Long press **MENU** and **▶ Right** on the projector until the power cord was plugged after **POWER indicator light** goes off.
4. Now the password function has been reset and the **Power On Lock** is **Off**. You can turn on the projector without entering any password. You can also activate the power-on lock functionality as if you were setting the password for the first time. See ["Setting a password" on page 35](#) for details.

Changing the password

1. Open the OSD menu and go to the **SYSTEM SETUP: Advanced > Security Settings > Change Password** menu.
2. Press **OK/IMAGE**. The message **'INPUT CURRENT PASSWORD'** is displayed.
3. Enter the old password.
 - If the password is correct, another message **'INPUT NEW PASSWORD'** is displayed.

-
- If the password is incorrect, the password error message is displayed lasting for three seconds, and the message **'INPUT CURRENT PASSWORD'** is displayed for your retry. You can press **MENU** to cancel the change or try another password.

4. Enter a new password.

 **The digits being input will be displayed as asterisks on-screen. Do make a note of your password, and keep the note in a safe place for later recall.**

5. Confirm the new password by re-entering the new password.
6. You have successfully assigned a new password to the projector. Remember to enter the new password next time the projector is started.
7. To leave the OSD menu, press **MENU**.

Disabling the password function

To disable password protection, go back to the **SYSTEM SETUP: Advanced > Security Settings > Power On Lock** menu after opening the OSD menu system. Select **Off** by pressing **◀/▶**. The message **'INPUT PASSWORD'** is displayed. Enter the current password.

- If the password is correct, the OSD menu returns to the **Security Settings** page with **'Off'** shown in the row of **Power On Lock**. You will not have to enter the password next time you turn on the projector.
- If the password is incorrect, the password error message is displayed lasting for three seconds, and the message **'INPUT PASSWORD'** is displayed for your retry. You can press **MENU** to cancel the change or try another password.

 **Though the password function is disabled, you need to keep the old password in hand should you ever need to re-activate the password function by entering the old password.**

Switching input signal

The projector can be connected to multiple devices at the same time. However, it can only display one full screen at a time.

Be sure the **Auto Search** function in the **INPUT** menu is **On** (which is the default of this projector) if you want the projector to automatically search for the signals.

You can also manually cycle through the available input signals.

1. Press **INPUT** on the projector or remote control. A source selection bar is displayed.
2. Press **▲/▼** until your desired signal is selected and press **OK/IMAGE**.

Once detected, the selected source information will be displayed on the screen for seconds. If there is multiple equipment connected to the projector, repeat steps 1-2 to search for another signal.

- **The brightness level of the projected image will change accordingly when you switch between different input signals. Data (graphic) "PC" presentations using mostly static images are generally brighter than "Video" using mostly moving images (movies).**
- **The input signal type effects the options available for the Image Mode. See ["Selecting a image mode" on page 42](#) for details.**
- **The native display resolution of this projector is in a 16:10 aspect ratio. For best display picture results, you should select and use an input signal which outputs at this resolution. Any other resolutions will be scaled by the projector depending upon the 'aspect ratio' setting, which may cause some image distortion or loss of picture clarity. See ["Selecting the aspect ratio" on page 40](#) for details.**

Adjusting the projected image

Adjusting the projection angle

The projector is equipped with 2 adjuster feet. These adjusters change the image height and projection angle. To adjust the projector, screw the adjuster foot to fine tune the horizontal angle. To retract the foot, screw the rear adjuster foot in a reverse direction.

If the projector is not placed on a flat surface or the screen and the projector are not parallel to each other, the projected image becomes trapezoidal. To correct this situation, see "[Correcting keystone](#)" on [page 39](#) for details.

- ⚠ • **Do not look into the lens while the lamp is on. The strong light from the lamp may cause damage to your eyes.**
- **Be careful when you screw the adjuster button as it is close to the exhaust vent where hot air comes from.**

Auto-adjusting the image

In some cases, you may need to optimize the picture quality. To do this, press **AUTO PC** on the projector or remote control. Within 3 seconds, the built-in Intelligent Auto Adjustment function will re-adjust the values of Frequency and Clock to provide the best picture quality.

The current source information will be displayed in the upper left corner of the screen for 3 seconds.

- ☞ • **The screen will be blank while AUTO PC is functioning.**
- **This function is only available when a PC signal (analog RGB) is selected.**

Fine-tuning the image size and clarity

For adjusting the size to your desired, you need to move the product for appropriate projection distance because of small Zoom ratio. Follow the procedure below for the installation and adjustment.

The focus will be off after adjusting the zoom, so be sure to readjust the focus. If the image is very blurry, adjusting the focus to make the image sharp will change the size of the projected image. Repeat the zoom and focus adjustments in alternation as necessary.

In the right figure, (A) Focus Ring, (B) Zoom Ring

1. Adjust Zoom. (using (B) Zoom Ring)
2. For the short distance/large screen, dial the ring fully to Wide end. For the long distance/small screen, dial the ring fully to Tele end.
3. Adjust Focus. (using (A) Focus Ring)
4. Move the product back and forth to adjust the screen size.
5. Adjust Focus again if necessary.

Correcting keystone

Keystoning refers to the situation where the projected image becomes a trapezoid due to angled projection.

To correct this, besides adjusting the height of the projector, you will need to manually correct it following one of these steps.

- Press \square/\triangle on the projector or remote control to display the Keystone correction page. Press \square to correct keystone at the top of the image. Press \triangle to correct keystone at the bottom of the image. Press \triangleright to correct keystone at the left side of the image. Press \triangleleft to correct keystone at the right side of the image.
- Using the OSD menu
 - Press **MENU** and then press $\triangleleft/\triangleright$ until the **DISPLAY** menu is highlighted.
 - Press \blacktriangledown to highlight **Keystone** and press **OK/IMAGE**. The **Keystone** correction page is displayed.
 - Press \square to correct keystone at the top of the image or press \triangle to correct keystone at the bottom of the image. Press \triangleleft to correct keystone at the left side of the image. Press \triangleright to correct keystone at the right side of the image.
- You can correct the vertical and horizontal keystones. However, their adjustment ranges are limited in such correction.**
- When the keystone adjustment is carried out, the adjustment value is indicated. Note that this value doesn't mean a projection angle.**
- The allowable range of the adjustment value in the keystone adjustment varies depending on the installation conditions.**
- Images may not be projected in a shape of a regular rectangle or with its aspect ratio 4:3, depending on the installation conditions of the projector and the screen.**
- When the keystone adjustment takes effect, the resolution decreases. In addition, stripes may appear or straight lines may bend in images with complicated patterns. They are not due to product malfunctions.**
- Noise may appear on the screen during the keystone adjustment because of the type of the video signal being projected and the setting values of the keystone adjustment. In such cases, set the keystone adjustment values in the range where the image is displayed without noise.**
- When the keystone adjustment is carried out, the image may not be displayed correctly because of the type of input signal.**

Correcting corner distortion

This function allows you to correct each distorted image corner to get a perfect rectangular image. You can manually adjust four corners of the image by setting the horizontal and vertical values.

- Press **MENU** and then press $\triangleleft/\triangleright$ until the **DISPLAY** menu is highlighted.
- Press \blacktriangledown to highlight **Corner Adjustment** and press **OK/IMAGE**. The **Corner Adjustment** correction page is displayed.
- Press $\triangleleft/\blacktriangle/\blacktriangledown/\triangleright$ to select one corner and press **OK/IMAGE**.
- Press $\blacktriangle/\blacktriangledown$ to adjust vertical values.
- Press $\triangleleft/\triangleright$ to adjust horizontal values.
- After one corner is adjusted, press **MENU** to return to the **Corner Adjustment** correction page.
- You can press $\triangleleft/\blacktriangle/\blacktriangledown/\triangleright$ to select another corner and repeat step 4-7 to make more adjustments.

Magnifying and searching for details

If you need to find the details on the projected picture, magnify the picture. Use the direction arrow keys for navigating the picture.

- Using the remote control
 1. Press **D.ZOOM +/-** to display the Zoom bar.**
 2. Press **D.ZOOM +** to magnify the center of the picture. Press the key repeatedly until the picture size is suitable for your need.**
 3. Use the directional arrows (**▲**, **▼**, **◀**, **▶**) on the remote control to navigate the picture.
 4. To restore the picture to its original size, press **AUTO PC**. You can also press **D.ZOOM -**. When the key is pressed again, the picture is further reduced until it is restored to the original size.
- Using the OSD menu
 1. Press **MENU** and then press **◀/▶** until the **DISPLAY** menu is highlighted.
 2. Press **▼** to highlight **D.ZOOM** and press **OK/IMAGE**. The Zoom bar is displayed.
 3. Repeat steps 2-4 in the section of "Using the remote control" above. Or if you are using the projector control panel, continue to the following steps.
 4. Press **▲** on the projector repeatedly to magnify the picture to a desired size.
 5. To navigate the picture, press **OK/IMAGE** to switch to the panning mode and press the directional arrows (**▲**, **▼**, **◀**, **▶**) to navigate the picture.
 6. Use the directional arrows (**▲**, **▼**, **◀**, **▶**) on the projector or remote control to navigate the picture.
 7. To reduce size of the picture, press **OK/IMAGE** to switch back to the zoom in/out functionality, and press **AUTO PC** to restore the picture to its original size. You can also press **▼** repeatedly until it is restored to the original size.

**When the projector and computer are connected via USB, the function (Page UP/Page DOWN) which operates the computer from the remote controller is set.

 **The picture can only be navigated after the picture is magnified. You can further magnify the picture while searching for details.**

Selecting the aspect ratio

The 'aspect ratio' is the ratio of the image width to the image height. Most analog TV and computers are in 4:3 ratio, and digital TV and DVDs are usually in 16:9 ratio.

With the advent of digital signal processing, digital display devices like this projector can dynamically stretch and scale the image output to a different aspect than that of the image input signal.

To change the projected image ratio (no matter what aspect the source is):

1. Press **MENU** and then press **◀/▶** until the **DISPLAY** menu is highlighted.
2. Press **▼** to highlight **Aspect**.
3. Press **◀/▶** to select an aspect ratio to suit the format of the video signal and your display requirements.

About the aspect ratio

 In the pictures below, the black portions are inactive areas and the white portions are active areas. OSD menus can be displayed on those unused black areas.

1. **Auto:** Scales an image proportionally to fit the projector's native resolution in its horizontal width or its vertical height. This is suitable when you want to make most use of the screen without altering the image's aspect ratio.

2. **Real:** The image is projected as its original resolution, and resized to fit within the display area. For input signals with lower resolutions, the projected image will display smaller than if resized to full screen. You could adjust the zoom setting to decrease or increase the image size if necessary. You may also need to refocus the projector after making these adjustments. For input signals with high resolutions, the projected image will be scaled proportionally to fit the projector's native resolution in its horizontal width or its vertical height.

3. **16:10:** Scales an image so that it is displayed in the center of the screen with a 16:10 aspect ratio. This is most suitable for images which are already in a 16:10 aspect.

4. **16:9:** Scales an image so that it is displayed in the center of the screen with a 16:9 aspect ratio. This is most suitable for images which are already in a 16:9 aspect, like high definition TV and 16:9 aspect DVD movies, as it displays them without aspect alteration.

5. **4:3:** Scales an image so that it is displayed in the center of the screen with a 4:3 aspect ratio. This is most suitable for 4:3 images like computer monitors, standard definition TV and 4:3 aspect DVD movies, as it displays them without aspect alteration.

Useful functions available during a presentation

Selecting a image mode

The projector is preset with several predefined image modes so that you can choose one to suit your operating environment and input signal picture type.

To select a operation mode that suits your need, you can follow one of the following steps.

- Press **OK/IMAGE** on the remote control or projector repeatedly until your desired mode is selected.
- Go to the **PICTURE > Image Mode** menu and press **◀/▶** to select a desired mode.

Image modes for different types of signals

The image modes available for different types of signals are listed below.

1. **Presentation mode:** Suitable for projecting images with a lot of text.
2. **Standard mode:** Suitable for projecting computer screens or colorful images (movies), etc.
3. **sRGB mode:** Suitable for projecting photos from a digital camera that supports sRGB. Compatible with the sRGB standard.
4. **Movie mode:** Suitable for projecting colorful images (movies).
5. **DICOM mode:** Suitable for projecting medical images (movies).
This projector is not the display monitor for a medical image. It cannot be used for the radiological image reading or medical examination.
6. **User 1/User 2 mode:** You can save image quality settings that you have made as a custom setting. You can then select the saved settings as an image mode. See ["Setting the User 1/User 2 mode" on page 42](#) for details.

☞ **It determines whether the input signal is a PC signal or video signal and then automatically recalls the image mode that was last selected for that signal.**

Setting the User 1/User 2 mode

There are two user-definable modes if the current available image modes are not suitable for your need. **User 1** (Presentation mode based) is for PC sources, and **User 2** (Standard mode based) is for Video sources.

1. Press **MENU** to open the On-Screen Display (OSD) menu.
2. Go to the **PICTURE > Image Mode** menu.
3. Press **◀/▶** to select **User 1** to **User 2**.
4. Press **▼** to select a sub-menu item to be changed and adjust the value with **◀/▶**. See ["Fine-tuning the image quality in user modes"](#) below for details.
5. The settings will be stored automatically.

Fine-tuning the image quality in user modes

According to the detected signal type, there are some user-definable functions available when **User 1** or **User 2** mode is selected. You can make adjustments to these functions based on your needs.

Adjusting Brightness

Highlight **Brightness** in the **PICTURE** menu and adjust the values by pressing **◀/▶** on the projector or remote control.

The higher the value, the brighter the image. And lower the setting, darker the image. Adjust this control so the black areas of the image appear just as black and that detail in the dark areas is visible.

Adjusting Contrast

Highlight **Contrast** in the **PICTURE** menu and adjust the values by pressing **◀/▶** on the projector or remote control.

The higher the value, the greater the contrast. Use this to set the peak white level after you have previously adjusted the **Brightness** setting to suit your selected input and viewing environment.

Adjusting Color

Highlight **Color** in the **PICTURE** menu and adjust the values by pressing ◀/▶ on the projector or remote control.

Lower setting produces less saturated colors. If the setting is too high, colors on the image will be overpowering, which makes the image unrealistic.

Adjusting Tint

Highlight **Tint** in the **PICTURE** menu and adjust the values by pressing ◀/▶ on the projector or remote control.

The higher the value, the more reddish the picture becomes. The lower the value, the more greenish the picture becomes.

Adjusting Sharpness

Highlight **Sharpness** in the **PICTURE** menu and adjust the values by pressing ◀/▶ on the projector or remote control.

The higher the value, the sharper the picture becomes. The lower the value, the softer the picture becomes.

Adjusting BrilliantColor™

Highlight **BrilliantColor™** in the **PICTURE** menu and select by pressing ◀/▶ on the projector or remote control.

This feature utilizes a new color-processing algorithm and system level enhancements to enable higher brightness while providing truer, more vibrant colors in picture. It enables a greater than 50% brightness increase in mid-tone images, which are common in video and natural scenes, so the projector reproduces images in realistic and true colors. If you prefer images with that quality, select **On**. If you do not need it, select **Off**.

On is the default and recommended selection for this projector. When **Off** is selected, the **Color Temperature** function and **6-axis Color Adjust** are not available.

Selecting a Color Temperature

Highlight **Color Temperature** in the **PICTURE** menu and adjust the values by pressing ◀/▶ on the projector or remote control.

The options available for color temperature* settings vary according to the signal type selected.

1. **High:** The image becomes tinted with blue. (cold colors).
2. **Middle:** The image uses standard colors.
3. **Low:** The image becomes tinted with red. (warm colors).

*About color temperatures:

There are many different shades that are considered to be "white" for various purposes. One of the common methods of representing white color is known as the "color temperature". A white color with a low color temperature appears to be reddish white. A white color with a high color temperature appears to have more blue in it.

6-axis Color Adjust

In most installation situations, color management will not be necessary, such as in classroom, meeting room, or lounge room situations where lights remain on, or where building external windows allow daylight into the room.

Only in permanent installations with controlled lighting levels such as boardrooms, lecture theaters, or home theaters, should color management be considered. Color management provides fine color control adjustment to allow for more accurate color reproduction, should you require it.

Proper color management can only be achieved under controlled and reproducible viewing conditions. You will need to use a colorimeter (color light meter), and provide a set of suitable source images to measure color reproduction. These tools are not provided with the projector, however, your projector

supplier should be able to provide you with suitable guidance, or even an experienced professional installer.

The Color Management provides six sets (RGBCMY) of colors to be adjusted. When you select each color, you can independently adjust its range and saturation according to your preference.

If you have purchased a test disc which contains various color test patterns and can be used to test the color presentation on monitors, TVs, projectors, etc. You can project any image from the disc on the screen and enter the **6-axis Color Adjust** menu to make adjustments.

To adjust the settings:

1. Go to the **PICTURE** menu and highlight **6-axis Color Adjust**.
2. Press **OK/IMAGE** and the **6-axis Color Adjust** page is displayed.
3. Highlight **Select Color** and press **◀/▶** to select a color from among Red, Green, Blue, Cyan, Magenta, or Yellow.
4. Press **▼** to highlight **Hue** and press **◀/▶** to select its range. Increase in the range will include colors consisted of more proportions of its two adjacent colors.

Please refer to the illustration to the right for how the colors relate to each other.

For example, if you select Red and set its range at 0, only pure red in the projected picture will be selected. Increasing its range will include red close to yellow and red close to magenta.

5. Press **▼** to highlight **Saturation** and adjust its values to your preference by pressing **◀/▶**. Every adjustment made will reflect to the image immediately.

For example, if you select Red and set its value at 0, only the saturation of pure red will be affected.

6. Press **▼** to highlight **Brightness** and adjust its values to your preference by pressing **◀/▶**. The brightness level of the primary color you select will be affected. Every adjustment made will reflect to the image immediately.
7. Repeat steps 3 to 6 for other color adjustments.
8. Make sure you have made all of the desired adjustments.
9. Press **MENU** to exit and save the settings.

☞ **Saturation is the amount of that color in a video picture. Lower settings produce less saturated colors; a setting of “0” removes that color from the image entirely. If the saturation is too high, that color will be overpowering and unrealistic.**

Using Screen Color

In the situation where you are projecting onto a colored surface such as a painted wall which may not be white, the **Screen Color** feature can help correct the projected picture's color to prevent possible color difference between the source and projected pictures.

To use this function, go to the **DISPLAY > Screen Color** menu and press **◀/▶** to select a color which is the closest to the color of the projection surface. There are several precalibrated colors to choose from: **Light Yellow, Pink, Light Green, Blue, and Blackboard**.

Setting the presentation timer

The presentation timer can indicate the presentation time on the screen to help you achieve better time management when giving presentations. Follow these steps to utilize this function:

1. Go to the **SYSTEM SETUP: Basic > Presentation Timer** menu and press **OK/IMAGE** to display the **Presentation Timer** page.
2. Press **▼** to highlight **Preset Time** and decide the timer period by pressing **◀/▶**. The length of time can be set from 1 to 5 minutes in 1-minute increments and 5 to 240 minutes in 5-minute increments.

☞ **If the timer is already on, the timer will restart whenever the Preset Time is reset.**

3. Press **▼** to highlight **Timer Display** and choose if you want the timer to show up on the screen by pressing **◀/▶**.

Selection	Description
Always	Displays the timer on screen throughout the presentation time.
1 min/2 min/3 min	Displays the timer on screen in the last 1/2/3 minute(s).
Never	Hides the timer throughout the presentation time.

4. Press **▼** to highlight **Position** and set the timer position by pressing **◀/▶**. The reminder position can be chosen from the upper-left, lower-left, upper-right to the lower-right corner of the screen.
5. Press **▼** to highlight **Counting Direction** and select your desired counting direction by pressing **◀/▶**.

Selection	Description
Count Up	Increases from 1 to the preset time.
Count Down	Decrease from the preset time to 1.

6. Press **▼** to highlight **Sound Reminder** and decide if you want to activate sound reminder by pressing **◀/▶**. If you select **On**, a double beep sound will be heard at the last 30 seconds of counting down/up, and a triple beep sound will be produced when the timer is up.
7. To activate the presentation timer, press **▼** and press **◀/▶** to select **On** and press **OK/IMAGE**.
8. A confirmation message is displayed. Highlight **Yes** and press **OK/IMAGE** to confirm. You will see the message "**Timer is On!**" appearing on the screen. The timer starts counting once the timer is turned on.

☞ **If you switch input signal or press AUTO PC when the timer is on, the timer will be stopped.**

To cancel the timer, perform the following steps.

1. Go back to the **Presentation Timer** page.
2. Press **▼** and press **◀/▶** to highlight **Off** and press **OK/IMAGE**. A confirmation message is displayed.
3. Highlight **Yes** and press **OK/IMAGE** to confirm. You will see the message "**Timer is Off!**" appearing on the screen.

Using the TIMER key

TIMER is a multi-functional key.

- If the presentation timer is off, pressing this key displays a confirmation message. You can decide whether to activate the timer or not by following the on-screen instruction.
- If the timer is already on, pressing this key displays a confirmation message. You can decide whether to restart, continue or turn off the timer by following the on-screen instruction.

Hiding the image

In order to draw the audience's full attention to the presenter, you can use **BLANK** on the projector or remote control to hide the screen image. Press any key on the projector or remote control to restore the image. The word '**BLANK**' appears at the lower right corner of the screen while the image is hidden.

You can set the blank time in the **SYSTEM SETUP: Basic > Blank Timer** menu to let the projector return the image automatically after a period of time when there is no action taken on the blank screen.

☞ **Once **BLANK** is pressed, the projector enters Economic mode automatically.**

⚠ **Do not block the projection lens from projecting as this could cause the blocking object to become heated and deformed or even cause a fire.**

Locking control keys

With the control keys on the projector locked, you can prevent your projector settings from being changed accidentally (by children, for example). When the **Panel Key Lock** is on, no control keys on the projector will operate except **POWER**.

1. Press **▶ 🔒** on the projector or remote control or go to the **SYSTEM SETUP: Basic > Panel Key Lock** menu, and select **On** by pressing **◀/▶** on the projector or remote control.

2. A confirmation message is displayed. Select **Yes** to confirm.

To release panel key lock, press any key of the projector once to display the panel key lock warning. With the warning being displayed, press **▶ 🔒** on the projector or remote control again. (Press and hold the key on the projector for 3 seconds.)

You can also use the remote control to enter the **SYSTEM SETUP: Basic > Panel Key Lock** menu and press **◀/▶** to select **Off**.

- ☞ **Keys on the remote control are still in use when panel key lock is enabled.**
- **If you press **POWER** to turn off the projector without disabling panel key lock, the projector will still be in locked status the next time it is turned on.**

Freezing the image

Press **FREEZE** on the remote control to freeze the image. The word '**FREEZE**' will be displayed in the upper left corner of the screen. To release the function, press any key on the projector or remote control.

Even if an image is frozen on the screen, the pictures are running on the video or other device. If the connected devices have active audio output, you will still hear the audio even though the image is frozen on screen.

☞ **Do not keep displaying a still picture for an extended period of time, as the afterimages may linger on the screen.**

Adjusting the sound

The sound adjustments made as below will have an effect on the projector speaker. Be sure you have made a correct connection to the projector audio input. See ["Connection" on page 26](#) for how the audio input is connected.

Muting the sound

To temporarily turn off the sound, press **MUTE** on the remote control, or:

1. Press **MENU** and then press **◀/▶** until the **SYSTEM SETUP: Advanced** menu is highlighted.
2. Press **▼** to highlight **Audio Settings** and press **OK/IMAGE**. The **Audio Settings** page is displayed.
3. Highlight **Mute** and press **◀/▶** to select **On**.

Adjusting the sound level

To adjust the sound level, press **VOL +/-** on the remote control, or:

1. Repeat steps 1-2 above.
2. Press **▼** to highlight **Volume** and press **◀/▶** to select a desired sound level.

Personalizing the projector menu display

The On-Screen Display (OSD) menus can be set according to your preferences. The following settings do not affect the projection settings, operation, or performance.

- **Menu Display Time** in the **SYSTEM SETUP: Advanced > Menu Settings** menu sets the length of time the OSD will remain active after your last key press. The time length ranges from 5 to 30 seconds in 5-second increments. Use **◀/▶** to select a suitable time frame.
- **Menu Position** in the **SYSTEM SETUP: Advanced > Menu Settings** menu sets the OSD position in five locations. Use **◀/▶** to select a preferred position.
- **Language** in the **SYSTEM SETUP: Basic** menu sets your familiar language for the OSD menus. See ["Using the menus" on page 34](#) for details.
- **Splash Screen** in the **SYSTEM SETUP: Basic** menu sets a preferred logo screen to be displayed during projector start-up. Use **◀/▶** to select a screen.

Shutting down the projector

1. Press **⏻ POWER** and a confirmation message displays prompting you.
If you don't respond in a few seconds, the message will disappear.
2. Press **⏻ POWER** a second time. The **POWER indicator light** flashes orange, the projection lamp shuts down, and the fans will continue to run for approximately 90 seconds (LX-MW500) /120 seconds (LX-MU500) to cool down the projector.
3. Once the cooling process finishes, the **POWER indicator light** is a steady orange and fans stop.
4. Disconnect the power cord from the wall socket if the projector will not be used in an extended period of time.

- **To protect the lamp, we suggest you not to operate the projector during the cooling process.**
- **Do not unplug the power cord before the projector shutdown sequence is complete or during the cooling down process.**

-
- If the projector is not properly shut down, to protect the lamp, when you attempt to re-start the projector, the fans will run for a few minutes to cool down. Press  POWER again to start the projector after the fans stop and the POWER indicator light turns orange.

Watching 3D content

This projector supports 3D content display using the DLP Link system.

This projector supports 3D image signals in **Frame Sequential/Frame Packing/Top-Bottom/Side-By-Side** format.

You need the following items to project and watch 3D content.

- 3D content capable device. For example, a computer with graphics board and software capable of outputting 3D images
- 3D content
- DLP-Link active electronic shutter 3D glasses (144Hz Compatible)

 **Not all 3D glasses are guaranteed to work correctly.**

Supported 3D signal

For supported timings in different 3D formats, see ["Timing chart" on page 76](#) for details.

To watch 3D content from a computer:

1. Connect the projector to a computer with a computer cable.

 **When connecting the projector to a computer, make sure you switch the computer's output signal so that it is only outputting to the projector (do not use dual mode).**

2. Output a 3D signal from the computer connected to the projector.
3. Turn on the DLP-Link system 3D glasses, and wear them to enjoy the content.
4. Choose an appropriate 3D format for the **"3D"** setting.
5. If you cannot see 3D objects, change the **"3D Sync"** setting from the OSD.

To watch 3D content from an HDMI device:

1. Connect the projector to a computer with an HDMI cable.
2. Output a 3D signal from the HDMI device connected to the projector.
3. Turn on the DLP-Link system 3D glasses, and wear them to enjoy the content.
4. The default setting of the **3D** menu is **Auto** and the projector automatically chooses an appropriate 3D format when detecting 3D contents. If the projector cannot recognize the 3D format, change the **"3D"** setting and choose a 3D mode.
5. If you cannot see 3D objects, change the **"3D Sync"** setting from the OSD.

-  • **It may be difficult to view 3D images if the room is too bright. Also, if there are fluorescent lights (50 Hz) in the room, the light may flicker when using 3D glasses. If this happens, turn down or turn off the fluorescent light.**
- You cannot change the image mode when viewing 3D content.

Cautions when viewing 3D content

- 3D content should not be viewed by people with a history of photosensitive epilepsy, people with heart conditions, pregnant women, the elderly, people with serious illnesses, or people with a history of epileptic seizures.
Viewing 3D content could aggravate their pre-existing conditions.
- Do not view 3D content if you are feeling unwell or are tired.
In addition, do not view 3D content if you are sleep deprived or inebriated.
- If you notice any of the following symptoms, stop viewing the 3D content immediately and wait until the symptoms subside.
 - If the image appears to be doubled or if the 3D effect is not clear.
 - Stop viewing if you feel your physical condition change, such as if you feel fatigued or unwell.
 - When enjoying 3D content that rotates, rolls, or shakes you may feel as if you are were moving, which can trigger a form of "sea sickness".
- Viewing 3D content for too long may cause eyestrain. To avoid this, be sure to take regular breaks.
Viewing 3D content for too long or viewing them from an angle may cause eyestrain and so on.

-
- **Children viewing 3D content should always be accompanied by an adult.**
Children may not tell you if they are feeling unwell when viewing 3D content, so always be sure to check with the child.
The minimum recommended age for viewing 3D content is six years old.
 - **Make sure you are at an appropriate distance from the front of the screen when viewing 3D content.**
Make sure you are at least three times the height of the screen away from the screen when viewing 3D content, and that your eyes are level with the screen.
 - **The image source may be reversed.**
Check that the settings are correct and that the 3D effect is being correctly applied.
If the image is inversed and the left and right eye images are swapped, the 3D effect does not work, which could cause eye strain or cause you to feel unwell.

Supervising and controlling by computer

With a proper LAN cable connection and LAN Control settings, you can operate the projector from a computer using a web browser or PJLink™ application when the computer and the projector are connected to the same local area network.

 **This projector supports Crestron® software and PJLink™.**

An example of connecting the projector to computer.

-  • **When using an external hub or router, use a Category 5 (or above) straight cable. (A crossed cable can be used with some hubs and routers. See the appropriate documentation for more information.)**
- **Don't touch the metal parts of the LAN connector and LAN cable because static electricity may be discharged from your body, causing damage to the projector.**

Configuring the LAN Settings

If you are in a DHCP environment:

1. Make sure the projector and your computer are properly connected to the same local area network.
2. Press **MENU** and then press **◀/▶** until the **SYSTEM SETUP: Advanced** menu is highlighted.
3. Press **▼** to highlight **LAN Settings** and press **OK/IMAGE**. The **LAN Settings** page is displayed.
4. Press **▼** to highlight **DHCP** and press **◀/▶** to select **On**.
5. Press **▼** to highlight **Apply** and press **OK/IMAGE**.
6. Please wait for around 15 - 20 seconds, and then re-enter the **LAN Settings** page.
7. The **Projector IP Address**, **Subnet Mask**, **Default Gateway**, and **DNS Server** settings will be displayed. Note down the IP address displayed in the **Projector IP Address** row.

-  • **If the Projector IP Address still does not appear, contact your network administrator.**
- **If the LAN cables are not properly connected, the Projector IP Address, Subnet Mask, Default Gateway, and DNS Server settings will display 0.0.0.0. Make sure the LAN cables are properly connected and perform the above procedures again.**

If you are in a non-DHCP environment:

1. Repeat steps 1-3 above.
2. Press **▼** to highlight **DHCP** and press **◀/▶** to select **Off**.
3. Contact your network administrator for information on the **Projector IP Address**, **Subnet Mask**, **Default Gateway**, and **DNS Server** settings.
4. Press **▼** to select the item you want to modify and press **OK/IMAGE**.
5. Press **◀/▶** to move the cursor and then press **▲/▼** to enter the value.
6. To save the setting, press **OK/IMAGE**. If you do not want to save the setting, press **MENU**.
7. Press **▼** to highlight **Apply** and press **OK/IMAGE**.

-  **If the LAN cables are not properly connected, the Projector IP Address, Subnet Mask, Default Gateway, and DNS Server settings will display 0.0.0.0. Make sure the LAN cables are properly connected and perform the above procedures again.**

Controlling the projector remotely through a web browser (e-Control®)

Once you have the correct IP address for the projector and the projector is on or in standby state, you can use any computer that is on the same local area network to control the projector.

When using this function, Adobe Flash Player has to be installed in your computer. Please download the latest version of Adobe Flash Player from the website of Adobe Systems Incorporated.

Recommended operating systems: WinXP, Win7, Win8.1, Mac OS X v10.4/v10.5/v10.6/v10.7.

1. Enter the IP address of the projector in the address bar of your browser and press enter. (for example, <http://192.168.0.146/>)

Recommended web browsers: IE11, Chrome 44.0 and below.

2. The remote network operation page is displayed. This page allows you to operate the projector as if you were using the remote control or control panel on the projector.

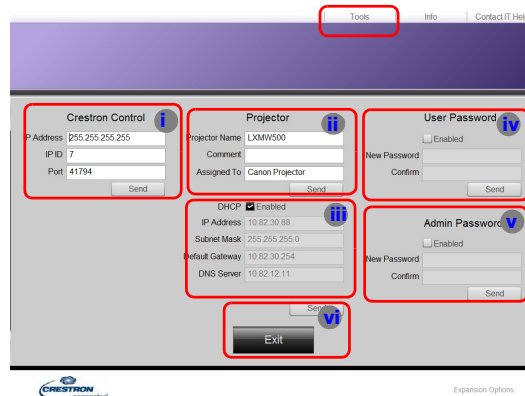

Press ◀/▶ to reveal more buttons.

- i. These buttons function the same as the ones on the OSD menus or remote control. See "2. PICTURE menu" on page 61 and "Remote control: LV-RC08" on page 18 for details.
- ii. To switch input source, click on your desired source.

When you use the projector control panel or remote control to change the OSD menu settings, it may take a while for the web browser to synchronize these changes with the projector.

3. The Tools page allows you to manage the projector, configure the LAN control settings and secure access of remote network operation on this projector.

- i. When using the Crestron Control System, please refer to the user manual of Crestron Control system for setup information.
- ii. You can name the projector, keep track of its location and the person in charge of it. This column allows a maximum of 22 single-byte characters.
- iii. You can adjust the **LAN Settings**.
- iv. Once set, access to the remote network operation page on this projector has been password-protected. To enable this function, check the box in front of "Enable" and type in your desired password in the New Password column and confirm the new password by re-entering the new password at the Confirm column. To disable password protection, uncheck the box.
- v. Once set, access to the Tools page has been password-protected. Refer to step [iv](#) for how to use the password function.
- vi. Press **Exit** to go back to the remote network operation page.

- **After making the adjustments, press the Send button and the data will be saved in the projector.**
 - **Once the password is set, the Log Out button will display beside the Tools button.**
 - **Write down your selected password in advance or right after the password is entered so that it is available to you should you ever forget it.**
 - **If you did not write down your password, and you absolutely do not remember it you can reset the password by following procedure.**
 - Open log in screen of e-Control. by your web browser.
 - Long press MENU and ► Right on the projector for 3 seconds.
 - Now the password has been reset.
 - **The software is available in English language.**
 - **When DHCP is turned on, there is a possibility of stopping the webpage connection. If this happens, please check the new IP address of the projector and enter the new address to connect again.**
4. The Info page displays the information and status of this projector.

- i. The information you entered in the Tools page will display here and these columns are empty when you use e-Control™ for the first time.
- ii. When the projector is in abnormal conditions, the following information will display.

☞ When the projector is in normal conditions or in any abnormal conditions other than the ones mentioned below, the Error Status column will be "0:No Error".

Error Status	Description
3: Lamp fail	The lamp fails to ignite or turns off during operation.
3: Over Temp	The projector temperature is too high or cannot be detected.
3: Fan Lock	The fan rotation speed cannot be set or detected.
3: Over Lamp Usage Time	The lamp is still in use after the lamp warning messages display.

(3 = Error)

- iii. Press **Exit** to go back to the remote network operation page.
5. After pressing the button 'Contact IT Help', the HELP DESK window will appear at the upper right corner. You will be able to deliver messages to RoomView™ software which is connected to the same local area network.

For more information, visit <http://www.crestron.com> & www.crestron.com/getroomview.

Controlling the projector using PJLink™ application

This projector supports standard protocol PJLink™ for projector control and you can control and monitor projector's operations using the same application among projectors of different models and different manufacturers.

About PJLink™

- To use PJLink™ function, the PJLink™ application software is required.
- For the specifications of PJLink™, access to the Web site of Japan Business Machine and Information System Industries Association (JBMIA). (<http://pjlink.jbmia.or.jp/english>)
- This projector is fully compliant to the specifications of JBMIA PJLink™ Class 1. It supports all the commands defined by PJLink™ Class 1, and the compliance has been verified with the PJLink™ standard specifications Version 1.4.

Utilizing the password function

To prevent unauthorized connection to the projector via PJLink™ application, the projector includes an option for setting up password security. To set the password:

1. Open the OSD menu and go to the **SYSTEM SETUP: Advanced > LAN Settings** menu. Press **OK/IMAGE**. The **LAN Settings** page is displayed.
2. Highlight **PJLink Certification** and select **On** by pressing **◀/▶**. The default password is "admin".
3. Press **▼** to highlight **Change PJLink Password** and press **OK/IMAGE**.
4. Enter the current password. Press **▶**, **◀** to select the digit and press **▲**, **▼** to select from 0-9, A-Z, a-z or symbols. Press **OK/IMAGE** to confirm.
5. Enter the new password and Press **OK/IMAGE** to confirm.

☞ If you forget the password, please use the password "projectorcontroller".

PJLink™ supported commands

The table below shows commands to control the projector using the PJLink™ protocol.

Command	Description	Remark (Parameter)
POWR	Power control	0 = Power off 1 = Power on
POWR?	Inquiry about the power state	0 = Standby 1 = Power on 2 = Cooling down 3 = Warming up
INPT	Input switching	11 = COMPUTER1 12 = COMPUTER2 21 = VIDEO 22 = S-VIDEO 31 = HDMI1/MHL 32 = HDMI2 33 = HDBaseT
INPT?	Inquiry about input switching	
AVMT	Mute control	10 = BLANK disable 11 = BLANK enable 20 = Audio mute disable 21 = Audio mute enable 30 = BLANK and audio mute disable 31 = BLANK and audio mute enable
AVMT?	Inquiry about the mute state	
ERST?	Inquiry about the error state	1st byte: Fan error, 0 or 2 2nd byte: Lamp error, 0 or 2 3rd byte: Temperature error, 0 or 2 4th byte: Always 0 5th byte: Always 0 6th byte: Other errors, 0 or 2 * 0 or 2 mean as follows: 0 = No error detected, 2 = Error
LAMP?	Inquiry about the lamp state	1st value (1 to 4 digits): Cumulative lamp operating time (This item shows a lamp operating time (hour) calculated based on that Lamp Mode is Economic.) 2nd value: 0 = Lamp off, 1 = Lamp on
INST?	Inquiry about the available inputs	The following value is returned. "11 12 21 22 31"
NAME?	Inquiry about the projector name	The command responds with the projector name specified in the Tools page.
INF1?	Inquiry about the manufacturer name	"Canon" is returned.
INF2?	Inquiry about the model name	"LX-MU500" or "LX-MW500" is returned.
INFO?	Inquiry about other information	DMD resolution is returned.
CLSS?	Inquiry about the class information	"1" is returned.

- The PJLink "INPT?" will be replied only when the source is displayed on screen. When there is no signal, only "ERR3 Time!" will be answered.

- The above-mentioned control may not be performed correctly or the monitoring data may not be obtained correctly in the following conditions:
 - During standby
 - During input source switching
 - During command processing
 - During AUTO PC execution
 - Before the splash screen disappears after the power is turned on.
- Use 1 computer to control/monitor 1 projector.
- For how to control/monitor using PJLink™, see the operation manual of the PJLink™ application you use.
- When you monitor the projector's operating state using this function by issuing inquiry commands successively, issue an inquiry command after receiving the response to the previous inquiry command from the projector.

Using the Network Function when the projector is in standby mode

When the **Standby LAN** in the **SYSTEM SETUP: Advanced > LAN Settings** menu is activated, the projector is able to provide the network function when it is in standby mode.

Glossary

For more detail of the glossary below, refer to the technical book that is commercially available.

Term	Description
DHCP	Abbreviation for Dynamic Host Configuration Protocol. This protocol automatically assigns IP Address to networked devices.
IP Address	Numerical address to identify networked computers.
Subnet Mask	A numeric value to define the number of bits used for a network address of a divided network (or subnet) in an IP Address.
Default Gateway	A server (or router) to communicate across networks (subnets) that are divided by Subnet Mask.

Menu operation

Menu system

Please note that the on-screen display (OSD) menus vary according to the signal type selected.

Main menu	Sub-menu	Options
1. DISPLAY	Screen Color	Off*/Light Yellow/Pink/Light Green/Blue/Blackboard

- The menu items are available when the projector detects at least one valid signal. If there is no equipment connected to the projector or no signal detected, limited menu items are accessible.

Description of each menu

		FUNCTION	DESCRIPTION
1. DISPLAY menu		Screen Color	Corrects the projected picture's color when the projection surface is not white. See "Using Screen Color" on page 44 for details.
		Aspect	There are several options to set the image's aspect ratio depending on your input signal source. See "Selecting the aspect ratio" on page 40 for details.
		Keystone	Corrects any keystone of the image. See "Correcting keystone" on page 39 for details.
		Corner Adjustment	Corrects corner distortion of the image. See "Correcting corner distortion" on page 39 for details.
	Position		Displays the position adjustment page. To move the projected image, use the directional arrow keys. The values shown on the lower position of the page change with every key press you made until they reach their maximum or minimum.
	Phase		Adjusts the clock phase to reduce image distortion. 
	H. Total Dots		Adjusts the horizontal width of the image.
	D.Zoom		Magnifies or reduces the projected image. See "Magnifying and searching for details" on page 40 for details.
	3D		This projector features a 3D function which enables you to enjoy 3D movies, videos, and sporting events in a more realistic way by presenting the depth of the images. You need to wear a pair of 3D glasses to view the 3D images. See "Watching 3D content" on page 49 for details.
	3D Sync		When you discover the inversion of the image depth, enable this function to correct the problem.

		FUNCTION	DESCRIPTION
2. PICTURE menu		Image Mode	Pre-defined image modes are provided so you can optimize your projector image set-up to suit your program type. See "Selecting a image mode" on page 42 for details.
		Brightness	Adjusts the brightness of the image. See "Adjusting Brightness" on page 42 for details.
		Contrast	Adjusts the degree of difference between dark and light in the image. See "Adjusting Contrast" on page 42 for details.
		Color	Adjusts the color saturation level -- the amount of each color in a video image. See "Adjusting Color" on page 43 for details.
		Tint	Adjusts the red and green color tones of the image. See "Adjusting Tint" on page 43 for details.  The function is only available when Video or S-Video with NTSC system is selected.
		Sharpness	Adjusts the image to make it look sharper or softer. See "Adjusting Sharpness" on page 43 for details.
		BrilliantColor™	Adjusts white peaking while maintaining correct color presentation. See "Adjusting BrilliantColor™" on page 43 for details.
		Color Temperature	See "Selecting a Color Temperature" on page 43 for details.
		6-axis Color Adjust	See "6-axis Color Adjust" on page 43 for details.
3. INPUT menu		Auto Search	See "Switching input signal" on page 37 for details.
4. SYSTEM SETUP: Basic menu		Presentation Timer	Reminds the presenter to finish the presentation within a certain time frame. See "Setting the presentation timer" on page 45 for details.
		Language	Sets the language for the On-Screen Display (OSD) menus. See "Using the menus" on page 34 for details.
		Image flip H/V	See "Choosing a location" on page 21 for details.
		Auto Power Off	Allows the projector to turn off automatically if no input signal is detected and no operation is made by user after a set period of time. See "Setting Auto Power Off" on page 66 for details.

		FUNCTION	DESCRIPTION
4. SYSTEM SETUP: Basic menu		Blank Timer	Sets the image blank time when the Blank feature is activated, once elapsed the image will return to the screen. See "Hiding the image" on page 46 for details.
		Panel Key Lock	Disables or enables all panel key functions except ⏻ POWER on the projector and keys on the remote control. See "Locking control keys" on page 46 for details.
		Sleep Timer	Sets the auto-shutdown timer. The timer can be set to a value between 30 minutes and 12 hours.
		Splash Screen	Allows you to select which logo screen will be displayed during projector start-up. See "Personalizing the projector menu display" on page 47 for details.
5. SYSTEM SETUP: Advanced menu		High Altitude Mode	<p>Set this function to On to maintain optimum system performance when using the projector at an altitude of 1500 m to 3000 m within a temperature range of 0°C to 30°C.</p> <p>Set High Altitude Mode to Off when using the projector at an altitude of 0 m to 1499 m within a temperature range of 0°C to 35°C.</p> <p>If High Altitude Mode is set to On, the cooling fan speeds up which increases the operating noise, and the amount of power consumed also increases.</p>
		Audio Settings	See "Adjusting the sound" on page 47 for details.
		Menu Settings	See "Personalizing the projector menu display" on page 47 for details.
		Lamp Settings	<p>Lamp Mode See "Setting Lamp Mode as Economic" on page 66 for details.</p> <p>Reset Lamp Time See "Resetting the lamp timer" on page 70 for details.</p> <p>Lamp Time See "Getting to know the lamp hour" on page 66 for details on how the total lamp hour is calculated.</p>
		Filter Settings	<p>Filter Mode Allows the filter timer to start or resume counting. See "Setting Filter Mode as On" on page 64 for details.</p> <p>Reset Filter Time Resets the filter timer only after the filter is replaced. See "Resetting the filter timer" on page 65 for details.</p>
		Security Settings	See "Utilizing the password function" on page 35 for details.

FUNCTION	DESCRIPTION
5. SYSTEM SETUP: Advanced menu	<p>Closed Caption Settings</p> <p>Activates the function by selecting On when the selected input signal carries closed captions.</p> <ul style="list-style-type: none"> Captions: An on-screen display of the dialogue, narration, and sound effects of TV programs and videos that are closed captioned (usually marked as "CC" in TV listings). <p> When the projector displays OSD or any dialog, captions are not displayed at the same time.</p> <p>Caption Channel</p> <p>Selects a preferred closed captioning mode. To view captions, select CC1, CC2, CC3, or CC4 (CC1 displays captions in the primary language in your area).</p>
	<p>Serial Port Setting</p> <p>Allows you to select a preferred control port: through the RS232 port (CONTROL port on the projector) or the HDBaseT port (LAN/HDBaseT input terminal on the projector).</p>
	<p>LAN Settings</p> <p>If you are using a LAN cable for connection, see "Supervising and controlling by computer" on page 51 for details.</p> <p>If you are using the PJLink™ application, see "Controlling the projector using PJLink™ application" on page 54 for details.</p>
	<p>Reset All Settings</p> <p>Returns all settings to the factory preset values.</p> <p> The following settings will still remain: User 1, User 2, Language, Image flip H/V, High Altitude Mode, Security Settings, LAN Settings, "Tools" menu in web UI, PJLink Password.</p>
6. INFORMATION menu	<p>Current System Status</p> <p>Input Shows the current signal source.</p> <p>Image Mode Shows the selected mode in the PICTURE menu.</p> <p>Resolution Shows the native resolution of the input signal.</p> <p>Color Format Shows input system format.</p> <p>Lamp Time Displays the number of hours the lamp has been used.</p> <p>Filter Time Displays the number of hours the filter has been used.</p>

Care of the projector

Your projector needs maintenance from time to time, depending on the environmental circumstances, and should be done by authorized service technicians only. Contact your dealer for instructions.

What you can do yourselves on a regular basis is to keep the lens clean, keep the cabinet clean, and replace the air filter.

Never remove any parts of the projector except the lamp and air filter cover. Contact your dealer if other parts need replacing.

Have the interior of the projector cleaned at regular intervals.

If the projector is used for a long period of time, dust could accumulate inside the projector. This could cause a fire or malfunction. It is recommended that periodic maintenance of the projector be performed. For details of maintenance costs, contact the Canon Customer Support Center.

Cleaning the lens

Clean the lens whenever you notice dirt or dust on the surface.

- Use a canister of compressed air to remove dust.
- If there is dirt or smears, use lens-cleaning paper or moisten a soft cloth with lens cleaner and gently wipe the lens surface.
- Never rub the lens with abrasive materials.

Cleaning the projector case

Before you clean the case, turn the projector off using the proper shutdown procedure as described in ["Shutting down the projector" on page 47](#) and unplug the power cord.

- To remove dirt or dust, wipe the case with a soft, lint-free cloth.
- To remove stubborn dirt or stains, moisten a soft cloth with water and a neutral pH detergent. Then wipe the case.
- Never use wax, alcohol, benzene, thinner or other chemical detergents. These can damage the case.
- Flammable substances may ignite causing fire or breakdown while the lamp is illuminating.

Replacing the air filter

Be sure to use the air filter dedicated to this projector, LX-FL02. The air filter is not bundled with the package of the projector. Contact your dealer for purchase of the air filter.

Before you replace the air filter, turn the projector off using the proper shutdown procedure as described in ["Shutting down the projector" on page 47](#) and unplug the power cord.

Follow the below illustrations to replace the air filter (LX-FL02). Contact your dealer when replacing the air filter unit with the projector mounted to the ceiling.

Setting Filter Mode as On

Set **Filter Mode** to **On** only when using the projector after the air filter is properly attached. Failing to do so will result in a shorter lamp life.

1. Press **MENU** and then press **◀/▶** until the **SYSTEM SETUP: Advanced** menu is highlighted.
2. Press **▼** to highlight **Filter Settings** and press **OK/IMAGE**. The **Filter Settings** page is displayed.
3. Press **▼** to highlight **Filter Mode** and press **◀/▶** to select **On**.

Remember to set **Filter Mode** to **Off** when using the projector with the air filter removed. Doing so does not reset the filter timer. The timer will continue counting the next time you fit the filter back on and set **Filter Mode** to **On**.

Resetting the filter timer

Reset the filter timer after a new filter is installed.

1. Press **MENU** and then press ◀/▶ until the **SYSTEM SETUP: Advanced** menu is highlighted.
2. Press ▼ to highlight **Filter Settings** and press **OK/IMAGE**. The **Filter Settings** page is displayed.
3. Press ▼ to highlight **Reset Filter Time** and press **OK/IMAGE**. A warning message is displayed asking if you want to reset the filter timer. Highlight **Reset** and press **OK/IMAGE**. The reset time will be reset to '0'.

Storing the projector

If you need to store the projector for an extended time, please follow the instructions below:

- Make sure the temperature of the storage area is within the recommended range for the projector. Please refer to "[Specifications](#)" on page 73 or consult your dealer about the range.
- Retract the adjuster feet.
- Remove the battery from the remote control.
- Pack the projector in its original packing or equivalent.

Transporting the projector

It is recommended that you ship the projector with its original packing or equivalent.

Lamp information

Getting to know the lamp hour

When the projector is in operation, the duration (in hours) of lamp usage is automatically calculated by the built-in timer. The method of calculating the equivalent lamp hour is as follows:

Total Lamp Hour = (hours used in **Normal** mode) + 4/5*(hours used in **Economic** mode)

 See "**Setting Lamp Mode as Economic**" below for more information on **Economic** mode.

To obtain the lamp hour information:

1. Press **MENU** and then press **◀/▶** until the **SYSTEM SETUP: Advanced** menu is highlighted.
2. Press **▼** to highlight **Lamp Settings** and press **OK/IMAGE**. The **Lamp Settings** page is displayed.
3. You will see the **Lamp Time** information appearing on the menu.
4. To leave the menu, press **MENU**.

You can also get the lamp hour information on the **INFORMATION** menu.

Extending lamp life

Lamps should be replaced about every 2,000 (used in **Normal** Mode)–2,500 (used in **Economic** Mode) hours. Note that there is no guarantee how long lamps will last.

To keep the lamp life as long as possible, you can do the following settings via the OSD menu.

Setting Lamp Mode as Economic

Using **Economic** mode reduces system noise and power consumption by approximately 20%. If the **Economic** mode is selected, the light output will be reduced and result in darker projected pictures.

Setting the projector in **Economic** mode also extends the lamp operation life. To set **Economic** mode, go into the **SYSTEM SETUP: Advanced > Lamp Settings > Lamp Mode** menu and press **◀/▶**.

-  • **When this mode is switched, the projected images may flicker.**
- **If this mode is frequently switched, the lamp may be deteriorated.**

Setting Auto Power Off

This function allows the projector to turn off automatically if no input source is detected and no operation is made by user after a set period of time to prevent unnecessary waste of lamp life.

To set **Auto Power Off**, go into the **SYSTEM SETUP: Basic > Auto Power Off** menu and press **◀/▶**. The time period can be set from 5 to 30 minutes in 5-minute increments. If the preset time lengths are not suitable for your presentation, select **Disable**. The projector will not automatically shut down in a certain time period.

Timing of replacing the lamp

When the lamp indicator lights up red or a message appears suggesting it is time to replace the lamp, please install a new lamp or consult your dealer. An old lamp may cause a malfunction in the projector and in some instances the lamp may explode.

 **The LAMP indicator light and TEMPerature indicator light will light up if the lamp becomes too hot. Turn the power off and let the projector cool for 45 minutes. If the Lamp or TEMPerature indicator light still lights up after turning the power back on, please contact your dealer. See "Indicators" on page 71 for details.**

The following lamp warning displays will remind you to change the lamp.

Status	Message
The lamp has been in operation for 1500 hours. Install a new lamp for optimal performance. If the projector is normally run with Economic selected (See " Setting Lamp Mode as Economic " on page 66), you may continue to operate the projector until the 1950 hour lamp warning appears.	<div>Notice</div> <div>Order Replacement Lamp Lamp>1500 Hours</div> <div>OK</div>
The lamp has been in operation for 1950 hours. A new lamp should be fitted to avoid the inconvenience when the projector runs out of lamp time.	<div>Notice</div> <div>Replace Lamp Soon Lamp>1950 Hours</div> <div>OK</div>
The lamp has been in operation for 2000 hours. It is strongly recommended that you replace the lamp at this age.  The lamp is a consumable item. The lamp brightness diminishes with use. This is normal lamp behavior. You can replace the lamp whenever you notice that the brightness level has significantly diminished. If the lamp is not replaced beforehand, it must be replaced after 2000 hours usage.	<div>Notice</div> <div>Replace Lamp Now Lamp>2000 Hours</div> <div>OK</div>
The lamp MUST be replaced before the projector will operate normally.	<div>WARNING</div> <div>Out of Lamp Usage Time Replace lamp (Refer to user manual) Then reset lamp timer</div> <div>OK</div>

Replacing the lamp

Spare lamp: LX-LP02

- Be sure to replace the lamp with a new lamp separately sold that is exclusive to this projector. Contact your dealer for purchase of the lamp.
 - To reduce the risk of electrical shock, always turn the projector off and disconnect the power cord before changing the lamp.
 - To reduce the risk of severe burns, allow the projector to cool for at least 45 minutes before replacing the lamp.
 - To reduce the risk of compromising image quality, do not touch the optical components inside when the lamp is removed.
 - Be sure to install the lamp securely. When the lamp isn't installed properly, it won't illuminate. Improper installation may also result in fire.
 - If the lamp should break, never shake the lamp box or hold it in front of your face after removing it. The glass fragments may fall out and cause injury to your eyes.
 - In the event that the high-pressure mercury lamp exploded, glass fragments may have been scattered inside the projector. Ask your dealer to replace the lamp and to inspect the inside of the projector. When you clean or replace the lamp by yourself, be sure to hold the handle of the lamp. You may get injured by glass fragments.
 - Contact your dealer when replacing the lamp unit with the projector mounted to the ceiling.
 - Don't remove the lamp for any purpose other than replacement. Unnecessary removal of the lamp may result in a breakdown.
 - This projector uses a high-pressure mercury lamp as the light source. The high-pressure mercury lamp may explode or fail to illuminate permanently because of an impact, scratch, or deterioration through use. The period of time until explosion or permanent failure to illuminate varies considerably from lamp to lamp, depending on operation conditions. Therefore, the lamp may explode soon after the start of use.
 - The possibility of explosion of the lamp increases if you use it beyond its replacement period. When the instruction of lamp replacement appears, replace it with a new one immediately even if the lamp is still lighting normally.
 - When the high-pressure mercury lamp explodes, glass fragments will scatter inside or outside the lamp box and the gas charged inside the lamp will diffuse inside or outside the projector. The gas inside the lamp contains mercury. Be careful not to breathe it or avoid it from entering your eye or mouth. If you should breathe it or if it should enter your eye or mouth, see a doctor immediately.
 - This lamp contains mercury. Consult your local hazardous waste regulations to dispose of this lamp in a proper manner.
 - Be sure to use the lamp dedicated to this projector, LX-LP02. Use of other lamps may cause a failure of the projector.
1. Turn the power off and disconnect the projector from the wall socket. If the lamp is hot, avoid burns by waiting for approximately 45 minutes until the lamp has cooled.
 2. Unscrew the screws on the lamp cover.

3. Remove the lamp cover from the projector.

①, ②

Slide open the lamp cover, pushing up the allow parts of the front panel.

⚠ Do not turn the power on with the lamp cover removed.

4. Confirm a position of the lamp protection film to put a new film on the same position later. Remove and dispose of the lamp protection film. ③

5. Loosen the screw that secures the lamp.

6. Lift the handle so that it stands up. Use the handle to slowly pull the lamp out of the projector.

- **Pulling it too quickly may cause the lamp to break and scatter broken glass in the projector.**
- **Do not place the lamp in locations where water might splash on it, children can reach it, or near flammable materials.**
- **Do not insert your hands into the projector after the lamp is removed. If you touch the optical components inside, it could cause color unevenness and distortion of the projected images.**

7. As shown in the figure, lower the new lamp into the lamp compartment while aligning the lamp with the holes in the lamp compartment. Make sure it fits in the projector.

8. Tighten the screw that secures the lamp.

- **Loose screw may cause a bad connection, which could result in malfunction.**
- **Do not over tighten the screw.**

9. Ensure the handle is fully laid flat and locked in place.

10. Put the lamp protection film supplied with the new lamp on the lamp compartment. ④
11. As shown in the figure, place the lamp cover on the projector. ⑤

12. Tighten the screws that secure the lamp cover.

- **Loose screw may cause a bad connection, which could result in malfunction.**
- **Do not over tighten the screws.**

13. Restart the projector.

Do not turn the power on with the lamp cover removed.

Resetting the lamp timer

14. After the startup logo, open the On-Screen Display (OSD) menu. Go to the **SYSTEM SETUP: Advanced > Lamp Settings** menu. Press **OK/IMAGE**. The **Lamp Settings** page is displayed. Press **▼** to highlight **Reset lamp timer** and press **OK/IMAGE**. A warning message is displayed asking if you want to reset the lamp timer. Highlight **Reset** and press **OK/IMAGE**. The lamp time will be reset to '0'.

Do not reset if the lamp is not new or replaced.

Indicators

Light			Status & Description
POWER	TEMP	LAMP	
Power events			
Orange	Off	Off	Stand-by mode.
Green Flashing	Off	Off	Powering up.
Green	Off	Off	Normal operation.
Orange Flashing	Off	Off	Normal power-down cooling.
Red	Off	Off	FW Download.
Green	Off	Red	Color Wheel start fail.
Red Flashing	Off	Off	Scaler shutdown fail (data abort).
Burn-in events			
Green	Off	Off	Burn-in ON
Green	Green	Green	Burn-in OFF
Lamp events			
Off	Off	Red	Lamp error in normal operation.
Off	Off	Red Flashing	Lamp is not lit up.
Thermal events			
Red	Red	Off	Fan 1 error (the actual fan speed is $\pm 25\%$ outside the desired speed).
Red	Red Flashing	Off	Fan 2 error (the actual fan speed is $\pm 25\%$ outside the desired speed).
Red	Green	Off	Fan 3 error (the actual fan speed is $\pm 25\%$ outside the desired speed).
Red	Green Flashing	Off	Fan 4 error (the actual fan speed is $\pm 25\%$ outside the desired speed).
Red Flashing	Red	Off	Fan 5 error (the actual fan speed is $\pm 25\%$ outside the desired speed).
Red Flashing	Red Flashing	Off	Fan 6 error (the actual fan speed is $\pm 25\%$ outside the desired speed).
Green	Red	Off	Temperature 1 error (over limited temperature, 55°C (131°F)).

Troubleshooting

? The projector does not turn on

Cause	Remedy
There is no power from the power cord.	Plug the power cord into the AC inlet on the projector, and plug the power cord into the power outlet. If the power outlet has a switch, make sure that it is switched on.
Attempting to turn the projector on again during the cooling process.	Wait until the cooling down process has completed.

? No picture

Cause	Remedy
The video source is not turned on or connected correctly.	Turn the video source on and check that the signal cable is connected correctly.
The projector is not correctly connected to the input signal device.	Check the connection.
The input signal has not been correctly selected.	Select the correct input signal with the INPUT key on the projector or remote control.

? Blurred image

Cause	Remedy
The projection lens is not correctly focused.	Adjust the focus of the lens using the focus ring.
The projector and the screen are not aligned properly.	Adjust the projection angle and direction as well as the height of the unit if necessary.
The lens cover is still closed.	Open the lens cover.
Depending on video signal timing, the projector needs to fine-tune for less blurred image.	Adjust Phase in the DISPLAY menu.

? Remote control does not work

Cause	Remedy
The battery is out of power.	Replace the battery with a new one.
There is an obstacle between the remote control and the projector.	Remove the obstacle.
You are too far away from the projector.	Stand within 8 meters (26 feet) of the projector.

? The password is incorrect

Cause	Remedy
You do not remember the password.	Please see "Resetting the password function" on page 35 for details.

? The LAN function cannot be used

Cause	Remedy
LAN control settings or LAN cable connection are problematic.	Verify the LAN control settings. Please see "Configuring the LAN Settings" on page 51 for details. Make sure the LAN cables are properly connected.
The web page is not shown in the web browser or the web page is not responding.	Reload the page to see the data after changing on the screen. If the page is not showing the modified data, check the IP address of projector and log-in again.

1080/50i	1920 x 1080	28.13	50	74.25
1080/60i	1920 x 1080	33.75	60	74.25
1080/50p	1920 x 1080	56.26	50	148.5
1080/60p	1920 x 1080	67.5	60	148.5

Supported Video timings

Timing	Resolution	Horizontal Frequency (kHz)	Vertical Frequency (Hz)	Dot Clock Frequency (MHz)
480i*	720(1440) x 480	15.73	59.94	27
480p	720 x 480	31.47	59.94	27
576i	720(1440) x 576	15.63	50	27
576p	720 x 576	31.25	50	27
720/50p**	1280 x 720	37.5	50	74.25
720/60p**	1280 x 720	45.00	60	74.25
1080/24P**	1920 x 1080	27	24	74.25
1080/30P	1920 x 1080	33.75	30	74.25
1080/50i***	1920 x 1080	28.13	50	74.25
1080/60i***	1920 x 1080	33.75	60	74.25
1080/50P	1920 x 1080	56.25	50	148.5
1080/60P	1920 x 1080	67.5	60	148.5

☞ ***Supported timing for 3D signal in Frame Sequential format.**

****Supported timing for 3D signal in Frame Packing and Top-Bottom formats.**

*****Supported timing for 3D signal in Side-By-Side format.**

Supported timing for Component-YPbPr input

Timing	Resolution	Horizontal Frequency (kHz)	Vertical Frequency (Hz)	Dot Clock Frequency (MHz)
480i	720 x 480	15.73	59.94	13.5
480p	720 x 480	31.47	59.94	27
576i	720 x 576	15.63	50	13.5
576p	720 x 576	31.25	50	27
720/50p	1280 x 720	37.5	50	74.25
720/60p	1280 x 720	45	60	74.25
1080/50i	1920 x 1080	28.13	50	74.25
1080/60i	1920 x 1080	33.75	60	74.25
1080/50P	1920 x 1080	56.25	50	148.5
1080/60P	1920 x 1080	67.5	60	148.5

 **Displaying a 1080i(1125i)@60Hz or 1080i(1125i)@50Hz signal may result in slight image vibration.**

Supported timing for Video and S-Video inputs

Video mode	Horizontal Frequency (kHz)	Vertical Frequency (Hz)	Sub-carrier Frequency (MHz)
NTSC	15.73	60	3.58
PAL	15.63	50	4.43
SECAM	15.63	50	4.25 or 4.41
PAL-M	15.73	60	3.58
PAL-N	15.63	50	3.58
PAL-60	15.73	60	4.43
NTSC4.43	15.73	60	4.43

Control Commands

You can control this projector by sending commands via CONTROL port or LAN port.

System Requirement

CONTROL port

Connection Cable	9-pin RS-232-C Cable (Crossover)
Communication Mode	RS-232-C asynchronous, half-duplex communication
Baud Rate	19200 bps/9600bps**
Character Length	8 bit
Parity Check	None
Stop Bits	1 bit
Flow Control	None

****When using HDBaseT.**

LAN port/HDBaseT input terminal

Connection System	TCP/IP Connection
Port	33336

Control Command

Function	Read/ Write	Operation	Command (ASCII)	Note
Power	W	Power On	POWER=ON<CR>	Enable during “Standby” state.
	W	Power Off	POWER=OFF<CR>	
	R	Power Status	GET=POWER<CR>	Enable during any power state. [Warming up] g:POWER=OFF2ON [Cooling down] g:POWER=ON2OFF
Source Selection	W	Computer1	INPUT=DSUB1<CR>	
	W	Computer2	INPUT=DSUB2<CR>	
	W	HDMI/MHL	INPUT=HDMI1<CR>	
	W	HDMI2	INPUT=HDMI2<CR>	
	W	HDBaseT	INPUT=HDBASET<CR>	
	W	Video	INPUT=VIDEO<CR>	
	W	S-Video	INPUT=S-VIDEO<CR>	
	R	Current source	GET=INPUT<CR>	

Audio Control	W	Mute On	MUTE=ON<CR>	
	W	Mute Off	MUTE=OFF<CR>	
	R	Mute Status	GET=MUTE<CR>	
	W	Volume +	RC=VOL_P<CR>	
	W	Volume -	RC=VOL_M<CR>	
	R	Volume Status	GET=AVOL<CR>	
Image Mode	W	Presentation	IMAGE=PRESENTATION<CR>	
	W	Standard	IMAGE=STANDARD<CR>	
	W	sRGB	IMAGE=SRGB<CR>	
	W	Movie	IMAGE=MOVIE<CR>	
	W	DICOM	IMAGE=DICOM<CR>	
	W	User1	IMAGE=USER_1<CR>	
	W	User2	IMAGE=USER_2<CR>	
	R	Image Mode	GET=IMAGE<CR>	
Aspect	W	Aspect 4:3	ASPECT=4:3<CR>	
	W	Aspect 16:9	ASPECT=16:9<CR>	
	W	Aspect Auto	ASPECT=AUTO<CR>	
	W	Aspect Real	ASPECT=TRUE<CR>	
	W	Aspect 16:10	ASPECT=16:10<CR>	
	R	Aspect Status	GET=ASPECT<CR>	
Image Flip H/V	W	Front Table	IMAGEFLIP=NONE<CR>	
	W	Rear Table	IMAGEFLIP=REAR<CR>	
	W	Front Ceiling	IMAGEFLIP=CEILING<CR>	
	W	Rear Ceiling	IMAGEFLIP= REAR_CEIL<CR>	
	R	Image flip H/V Status	GET=IMAGEFLIP<CR>	
Auto Search	W	Auto search On	QAS=ON<CR>	
	W	Auto search Off	QAS=OFF<CR>	
	R	Auto search status	GET=QAS<CR>	
Lamp	R	Lamp Hour	GET=LMPT<CR>	
	W	Lamp Mode Normal	LAMP=NORMAL<CR>	
	W	Lamp Mode Economic	LAMP=ECO<CR>	
	R	Lamp Mode Status	GET=LAMP<CR>	

Operation	W	Blank On	BLANK=ON<CR>	
	W	Blank Off	BLANK=OFF<CR>	
	R	Blank Status	GET=BLANK<CR>	
	W	Freeze On	FREEZE=ON<CR>	
	W	Freeze Off	FREEZE=OFF<CR>	
	R	Freeze Status	GET=FREEZE<CR>	
	W	Menu On	MENU=ON<CR>	
	W	Menu Off	MENU=OFF<CR>	
	W	Auto PC	RC=AUTOPC<CR>	
	W	Up	RC=UP<CR>	
	W	Down	RC=DOWN<CR>	
	W	Right	RC=RIGHT<CR>	
	W	Left	RC=LEFT<CR>	
	W	OK	RC=OK<CR>	
High Altitude	W	High Altitude mode On	HIGHALT=ON<CR>	
	W	High Altitude mode Off	HIGHALT=OFF<CR>	
	R	High Altitude mode status	GET=HIGHALT<CR>	

Control Response

Read/Write	Condition	Response	Example
W	Success	i:OK<CR>	< BLANK=ON<CR> > i:OK<CR>
W	Illegal format : Don't exist command or structure	e:0002 INVALID_COMMAND<CR>	< INVALID=ON<CR> > e:0002 INVALID_COMMAND<CR>
W	Unsupported item: this command parameter can't support	e:000A INVALID_PARAMETER<CR>	< BLANK=INVALID<CR> > e:000A INVALID_PARAMETER<CR>
W	Block item: Current state can't use.	e:1011 FUNCTION_NOT_AVAILABLE<CR>	< ASPECT=AUTO<CR> > e:1011 FUNCTION_NOT_AVAILABLE<CR>
R	Success	g:XXX=YYY<CR> XXX=Command Name, YYY=Parameter Name	< GET=BLANK<CR> > g:BLANK=ON<CR>

R	Unsupported item: this command parameter can't support	e:000A INVALID_PARAMETER<CR>	< GET=INVALID<CR> > e:000A INVALID_PARAMETER<CR>
---	---	---------------------------------	--

- ☞ • **If the projector didn't receive <CR> to finish a command within 5 seconds, it will timeout and you need to resend the command.**
- **No case sensitive.**
