MITSUBISHI ELECTRIC
### Changes for the Better

for a greener tomorrow

XL7100U
WL7200U

Exciting, Dynamic and Vibrant…from Installation to Operation

Take your presentation to a new level

Mitsubishi Electric, a world leader in the design and manufacture of high quality, high definition presentation and display products, has introduced a new range of installation projectors that utilise LCD technology. The XL7100U (XGA) and WL7200U (WXGA) share impressive lighting capabilities, high contrast figures and several environmentally friendly features, such as long-life lamps, an inorganic long-life LCD panel and unpainted chassis. Capable of producing clear and sharp large-screen presentations in lecture theatres, auditoriums, boardrooms and conference suites, these user friendly projectors are ideal for high impact visual communication.

displays.mitsubishielectric.eu

Brighter display solutions
High Image Quality

Impressive Brightness and Contrast

The XL7100U reproduces vibrant images using 6000 ANSI lumen*[1] brightness at a high contrast ratio of 2000:1. Even in large meeting rooms and theatre style settings, the liquid-crystal projection system ensures clear, sharp images with every detail.

*[1] WL7200U: 5500lm

High Performance Lens

The specifically designed lens comprises of 17 lenses in 13 clusters, including a high-performance ED (ultra-low dispersion) lens that is more efficient than a regular glass version. Image resolution all the way to peripheral boarders has been greatly improved.
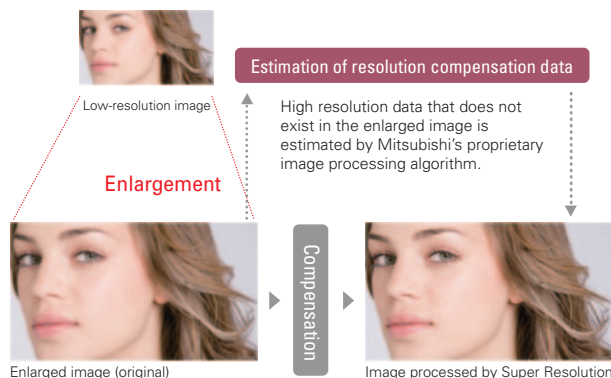

Natural Colour Matrix (NCM)

In addition to conventional red (R), green (G) and blue (B) colour gradations, the intermediate colours of yellow (Y), magenta (M) and cyan (C) can each be controlled independently. Accentuating the specified colours according to need ensures the reproduction of vivid colours and natural tones.

Super Resolution

The innovative advanced image processing algorithm is a product of Mitsubishi Electric. The technology analyses the original image for blurred components, estimates the high-resolution data not provided in the original signal and corrects the image quality. The result is a clear projection of images such as people's faces in fine detail.

Low-resolution image

Estimation of resolution compensation data

High resolution data that does not exist in the enlarged image is estimated by Mitsubishi's proprietary image processing algorithm.

Image processed by Super Resolution

High Reliability

Inorganic Liquid-crystal Panel

An inorganic liquid-crystal panel is incorporated into the 7000 series, increasing the service life compared to that of a conventional organic liquid crystal panel.

Long 4000 Hour Lamp Life

Designed with a lamp temperature controlling system, the 7000 series can support an estimated lamp rating of up to 4000 hours. The long estimated lamp life makes dramatic reductions in overall cost of ownership by decreasing the frequency of lamp replacements.

Lamp Life Comparison

3,000-hour lamp	Factory-installed lamp	First lamp replacement	Second lamp replacement
4,000-hour lamp	Factory-installed lamp	First lamp replacement	*Lower running costs*

3,000 hours 4,000 hours   6,000 hours   8,000 hours

Lamp life specification is an estimate based on verification under proper conditions and is not the duration of the warranty. Lamp will shut-off automatically when usage reaches the specified estimated maximum lamp hours. Service life may vary widely depending on usage and operating environment and conditions, as well as users' adherence to the maintenance and cleaning procedures provided in the user manual.

Roll-up Filter

To help prevent dust from collecting on the liquid-crystal panel, the chassis design comes complete with a cartridge type filter. The unit can be set so that the filter rolls automatically every 500, 750 or 1,000 hours, or alternatively users can wind it manually.

Eco friendly

Auto Power Off

If no image signal is output for a predetermined period of time*, power is automatically turned off, reducing energy savings by decreasing needless power consumption.

*Time preset by user

Stand-by Wattage under 0.3W*

Stand-by (low) mode power consumption is less than 0.3W, offering increased energy savings and further contributing to environmental preservation.

*When in stand-by (low) mode. At this time, use of the LAN function is not possible.
Paint-free Cabinet

As a measure to help protect the environment, eco-conscious paint-free cabinets are incorporated within the 7000 series.

Installation Flexibility

Wide-area Lens Shift

The WL7200U features a wide-area lens adjustment range of ±70% vertically and ±30% horizontally, for greater installation freedom. The zoom, focus and lens shift functions are all powered operation.

*XL7100U: ±60% vertically, +30% horizontally

±70%

±30%

Availability area for lens shift

Variety of Optional Lenses

Choose from four different lenses to best match the projection distance. Compared to previous lenses, each lens covers a wider range of projection ratios.

Quick Release Bayonet Mount

The bayonet mounting system incorporated offers one-touch lens removal, making it easy to change lenses after installation. Simply unscrew and remove the anti-drop cover, press down on the release button and turn the lens to remove it. Similarly, to install a lens, just insert it and turn.

Attractive Design

The 7000 series benefits from a sleek design with a modern centre-lens, white-based chassis and a terminal cover that hides unattractive cables. The remote control signal receiving section is now located on the backside of the projector, improving remote-control operation performance when mounted on the ceiling.
Geometric Corrections

- Keystone Correction
  Trapezoidal distortion caused when the projector is not positioned directly in front of the screen is corrected in both vertical and horizontal directions.

- Cornerstone Correction
  Pixel conversion is used to correct trapezoidal and diagonal distortion that causes oblique images, ensuring the correct aspect ratio.

screen

- Curved-surface Projection Correction
  Projectors in the series are equipped with a distortion correction function that can be used when projecting images onto a curved surface. Coordinates at the image's four corners can be adjusted during angled or stacked projection. This is extremely useful for unique applications, when users wish to project images onto special surfaces such as support pillars at event sites.

360° Projection Capability

Images can be projected over a full 360° range along the vertical axis* including reproduction on the ceiling or floor. The application possibilities are limitless.

360°

*Excluding use in high-altitude mode.

Additional features

Network Connectivity

The 7000 series are equipped with a RJ-45 LAN terminal for remote operation. Additionally, when used with Crestron RoomView™, integrated control of up to 250 projectors including power on/off control, message display and confirmation of lamp service hours is possible. Mitsubishi Electric 7000 series are equipped with AMX Device Discovery for simplified device management and compatible with PJLink™.

The trademark of PJLink is trademark applied for registration or registered trademark in Japan, the United States, and other countries and areas.

Quiet 30dB Operation

Fan noise during projector operation can be distracting during a presentation or video conference. The XL7100U and WL7200U projectors operate at a significantly low noise level of only 30dB (in low mode). As a result, presentations and conferences can be held without distracting projector noises in the background.
Additional Features:
- Direct power off
- Side access lamp replacement
- 2-Screen mode (PinP: XL7100U Split: WL7200U)
- ID-compatible Remote Control
  (set IDs for up to 63 projectors)
- Extended-distance Remote Control
  (wireless: 30m, wired: 100m)
- Test pattern
- High-altitude mode (1,500 to 2,700m)
- Virtual DICOM mode
