Changes for the Better

AV Installation Redefined...

Introducing the new WD3300U and XD3200U

Mitsubishi Electric a world leader in the design and manufacture of high quality, high definition presentation and display products has introduced two new high brightness installation projectors that utilise DLP® technology. The WD3300U, a WXGA widescreen unit and the XD3200U XGA projectors have been designed for lecture theatres, conference rooms and retail applications that require a fully featured and versatile installation projector. Continually looking at ways to improve our commitment to the installation market Mitsubishi has introduced a number of design improvements, including a new colour wheel, a new chassis design and a lamp drive system that helps to increase the overall performance, durability and reliability; as well as an enhanced 3 year loan replacement warranty that covers 24/7 usage.

The new WD3300U and XD3200U. AV installation redefined

OPERATION SIMPLIFIED WITH MITSUBISHI ELECTRIC'S USER-FRIENDLY DESIGN

Engineering excellence - Long life performance

New Colour Wheel System

Mitsubishi's enhanced colour wheel system has been developed to produce bright, vivid images whilst eliminating the risk of dust from accumulating around the colour wheels sensor. Designed to improve the overall performance of the projector, the WD3300U and XD3200U feature a mounted sensor and enclosed rotating shaft motor case which helps reduce the amount of dust particles from entering the unit.

Filter Free

DLP™ projectors are structurally airtight so there is no need for an intake filter, eliminating filter changes and lowering overall running costs.

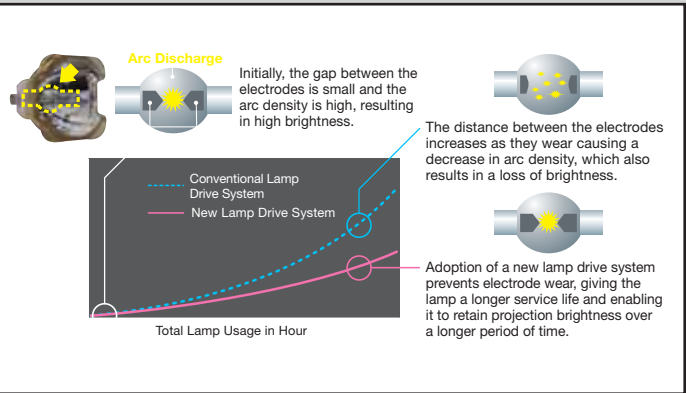

Long 4000hr Lamp Life

The WD3300U/XD3200U supports a lamp temperature controlling system that enables a long lamp life of up to 4000hours(*1). The longer lamp life makes dramatic reductions in overall costs of ownership by decreasing the frequency of lamp replacements (*2) .

(*1) - When lamp is used in "Low" mode. Maximum life in "Standard" mode is 2000hr.
(*2) - Lamp life refers to the average time required for brightness to be reduced by half, and not the time specified in the warranty. Usage time may vary according to the environment and conditions.

New Lamp Drive System

The WD3300U and XD3200U incorporate an optical design which optimises the lamp operation and makes it possible to stabilise the shape of the electrodes during extensive use. As a result, the maximum lamp service life is obtained and the projection brightness is extended over a longer period of time.

Installation Ease

With a side access lamp design, lamp replacements are quick and easy, even when the projectors are ceiling mounted. Featuring a centre lens, set up is made simple as the projection path is aligned to the centre of the screen.

The WD3300U and XD3200U come with an easily accessible lens function, for quick lens changes, without the need to move the projector. Further simplifying the installation, a range of optional lenses are available to ensure that these projectors can fit seamlessly into virtually any installation application.

24/7 Warranty

Designed for continual operation, the WD3300U and XD3200U have the added assurance of an extended 3 year guarantee that covers the projector for 24/7 usage. Engineered to the highest standard, Mitsubishi is confident that these new DLP® models offer the perfect solution for full system integration where a long life performance is required. (The warranty covers the projector for 24/7 use, excluding lamp replacements).

User Friendly

Ultra Quiet 26dBA Operation

Fan noise from a projector can be annoying and distracting during presentations. That's why Mitsubishi has adopted a hermetically sealed colour wheel and improved the air duct path, to further reduce the operating noise level to just 26dBA. As a result, audiences can enjoy presentations without the distraction of a noisy projector.

The air duct flow design has been improved so that the fan noise doesn't interfere with the intake-air flow. Additionally, the fan noise is blocked from direct exit, making a significant reduction in operation noise.

Corporate Logo

For dynamic presentations users can download corporate logos and images onto the WD3300U and XD3200U which can be shown during set up or whilst on standby.

IMPRESSIVE PICTURE QUALITY & INNOVATIVE DESIGN

Brilliant Colour™

BrilliantColour™ and Mitsubishi Electric Engineering for Superior Colour Performance

Brilliant Colour™, one of the latest innovations from Texas Instruments, produces amazingly rich and vibrant colours. Mitsubishi has developed a 5-segment Colour wheel (R, G, B, W and Y). By combining it with Brilliant Colour™ and selective lamp-powered modulation techniques, the WD3300U and XD3200U intelligently reproduce colours that improve the intensity and vibrancy across the entire screen.

Ultra Brightness

Providing high brightness images, the WD3300U delivers 4000 ANSI lumens and the XD3200U benefits from 4500 ANSI lumens, for eye catching presentations ideal for large meeting rooms and conference halls.

Lamp Power Modulation

Presentation Mode (for high brightness)

Light intensity increases for the white and yellow segments of the colour wheel, giving greater emphasis to bright colours in more vivid tones.

Auto Mode (for colour reproduction)

Light intensity increases for the RGB segment on the colour wheel, ensuring ample brightness while screening brilliant colours.
